## (54) NOVEL AMIDE DERIVATIVES AND INTERMEDIATES FOR THE SYNTHESIS THEREOF

(57) Novel compounds which are amide derivatives represented by general formula (I) and medicinal preparations containing the same having an eosinophilic infiltration inhibitory effect based on a potent interferon ( $\alpha, \gamma$ )-inducing activity and an excellent percutaneous absorbability and being efficacious in treating allergic inflammatory diseases such as atopic dermatitis, various tumors and viral diseases. In said formula, each symbol has the following meaning:  $R_1$  and  $R_2$ : each lower alkyl, etc.; X and Y: independently representing each oxygen,  $NR_4$ ,  $CR_5$  etc. (wherein  $R_4$  and  $R_5$  independently represent each hydrogen, an aromatic group, etc.); Z: an aromatic ring or heterocycle;  $R_6$ : hydrogen, lower alkoxy, etc.; g, i and k: independently representing each an integer of from 0 to 6; h, i and l: independently representing each an integer of 0 or 1; m: an integer of from 0 to 5; and n: an integer of from 2 to 12.

EP 0 894 797 A1

## Description

## TECHNICAL FIELD

[0001] The present invention relates to novel amide derivatives that have a potent interferon ( $\alpha$ ,  $\gamma$ )-inducing activity and excellent percutaneous absorbability and that are useful as therapeutic agents for allergic skin diseases such as atopic dermatitis associated with various tumors, viral diseases, and particularly eosinophilic leukocyte skin infiltration reaction, pharmaceutical preparations containing the compounds, and intermediates for synthesizing the compounds.

## BACKGROUND ART

[0002] Interferon  $\alpha$  and  $\gamma$  are peptides having an antineoplastic effect and an antiviral effect, and are used by intramuscular or subcutaneous injection for treating various tumors such as kidney cancer or multiple myeloma and viral diseases such as active chronic hepatitis type C. Interferon  $\gamma$  is used for treating tumors (kidney cancer). Since it also has a potent immunity controlling effect, its use for treating allergic diseases such as atopic dermatitis has been considered.

[0003] Conventional basic treatment of atopic dermatitis is external application of steroid agents and oral administration of antihistaminics or antiallergic agents. Other treatments include hyposensitization, allergen (mites, food) elimination, PUVA (psoralen long wavelength ultraviolet irradiation), and bacteria vaccine therapy. However, any of such treatments is not satisfactory. Particularly, steroid agents for external application show an immediate effect but cause side effects due to long-term continuous application, such as atrophy of skin, angiotelectasis, flush, purpura, and readily infectivity. Recently, the treatment of atopic dermatitis is directed to therapy with cytokines whose mechanism of function is novel (Hidemi Nakagawa, Rinsho Meneki (Clinical Immunology) 27, (supple 16), 597-602 (1995), Sachiko Kobayashi et al., Rinsho Meneki (Clinical Immunology) 27, (supple 16), 603-609 (1995)). Patients with atopic dermatitis has imbalance between Th1 helper cells and Th2 helper cells. In other words, Th2 helper cells are dominant. The promising tentative theory is that increased production of cytokines such as interleukin-4 and interleukin-5 from Th2 cells promotes IgE production and differentiation, proliferation, and infiltration of phagocytes such as eosinophilic leukocytes to thereby induce inflammation. Generally, application of an antigen to sensitized human skin, it causes skin reaction that becomes maximum immediately and 4 to 8 hours after the application and lasts 24 to 48 hours thereafter. The former reaction is called immediate reaction (associated with IgE-fat cell) and the latter is called late allergic reaction. Particularly, it is said that the late reaction is closely related to symptom of allergic diseases including asthma. The mechanism of the late reaction has not been clarified. It is now considered as late phase reaction of the type I allergy associated with IgE-fat cells and is closely connected with infiltration of eosinophilic leukocytes due to dominance of Th2 helper cells (Motohiro Kurosawa, Rinsho Meneki (Clinical Immunology) 27(5), 564-574, 1995). The balance between Th1 helper cells and Th2 helper cells are regulated by interferon. Interferon  $\gamma$  enhances differentiation of Th0 cells to Th1 cells. Attempts have been made to use interferon  $\gamma$ , which corrects dominance of Th2 cells, for therapy of atopic dermatitis. The main interferon treatment is subcutaneous injection of recombinant interferon  $\gamma$  (Hanifin J.M., J. Am. Dermatol. 28, 189-197, 1993, Nishioka K. et al., J. Dermatol. 22(3), 181-185, 1995). It was reported that this treatment improved skin conditions and decreased the number of eosinophilic leukocytes in blood. Since interferon has an immunity potentiating effect, it does not cause side effects of readily-infectivity, which is often caused by treatment with steroids. However, it is expensive and causes other side effects (feverescence, cold-like symptoms, headache). Thus, it cannot be a satisfactory medicine. This is not only applied to the case that interferon is used for treating atopic dermatitis but also the case that it is used as an antiviral or an antitumor agent in the form of injection.

[0004] When interferon is administered from the outside of the body, it has still other problems. It can be expected to solve the problems of the interferon injection (cost and side effects) by topical application (external application) of a low molecular weight synthetic compound as an interferon inducer. Several interferon-inducing compounds are known. For example, the known compounds include some 1-substituted-1H-imidazo[4,5-c]quinoline-4-amine compounds, represented by 1-isobutyl-1H-imidazo[4,5-c]quinoline-4-amine (Imiquimod), which is an antiviral agent (European Patent No. 145340, U.S. Patent No. 4,689,338, U.S. Patent No. 4,698,348, U.S. Patent No. 4,929,624, European Patent No. 385630, U.S. Patent No. 5,346,905, etc.). Some of them are under clinical test as an external preparation. Since these are used to treat genital wart (Imiquimod, Pharma Projects 1996), their percutaneous absorbability is expected to be poor. They also show low interferon-inducing activity in humans.

[0005] Therefore, an objective of the present invention is to provide a novel compound that has an eosinophilic leukocyte infiltration-inhibiting effect based on a potent interferon ( $\alpha$ ,  $\gamma$ )-inducing activity and excellent percutaneous absorbability, causes fewer side effects, and thus effective for allergic inflammatory diseases such as atopic dermatitis, various tumors, and viral diseases, and a medicinal preparation containing the same.

## DESCRIPTION OF THE INVENTION

[0006] The present invention that solves the above problems is as follows:

- (1) an amide derivative represented by the following formula I and its pharmaceutically acceptable acid addition salt:

where in the formula I,  $R_1$  and  $R_2$  represent an alkyl group having 1 to 6 carbon atoms that may be branched and may form a ring together, or one of them may form a ring together with any atom in X, Y, or the methylene chain, X and Y independently represents an oxygen atom,  $S(O)_p$ , wherein p is an integer of 0 to 2,  $NR_4$ ,  $CR_5=CR_6$ ,  $CR_7R_8$ , or phenylene group that may be substituted, wherein  $R_4$ ,  $R_5$ ,  $R_6$ ,  $R_7$ , and  $R_8$  independently represents an hydrogen atom, a lower alkyl group, a hydroxyl group, a lower alkoxy group, an amino group, a mono- or di-lower alkyl substituted amino group, a carboxyl group, a lower alkoxy carbonyl group, aromatic ring group that may be substituted, or heterocyclic ring group that may be substituted, Z represents an aromatic ring or a heterocyclic ring, which may be substituted with a lower alkyl group, a hydroxyl group, a lower alkoxy group, or halogen,  $R_3$  represents a hydrogen atom, phenyl group that may be substituted, a lower alkyl group that may be substituted with a phenyl group, a phenoxy group, a benzyloxy group, a lower alkoxy group, an amino group, a mono- or di-lower alkyl substituted amino group, a carboxyl group, or a lower alkoxy carbonyl group, g, i, and k independently represents an integer of 0 to 6, h, j, and l independently represents 0 or 1, m represents an integer of 0 to 5, and n represents an integer of 2 to 12;

- (2) a medicinal preparation comprising the amide derivative of (1) above;

- (3) an intermediate represented by the following formula II for synthesizing the amide derivative of formula I:

where in the formula II,  $R_3'$  represents phenyl group that may be substituted, a lower alkyl group that may be substituted with a phenyl group, a phenoxy group, a benzyloxy group, a lower alkoxy group, an amino group, a mono- or di-lower alkyl substituted amino group, a carboxyl group, or a lower alkoxy carbonyl group, and n represents an integer of 2 to 12;

- (4) an intermediate represented by the following formula III for synthesizing the amide derivative of formula I:

where in the formula III,  $R_3$  represents a phenyl group that may be substituted, a lower alkyl group that may be substituted with a phenyl group, a phenoxy group, a benzyloxy group, a lower alkoxy group, an amino group, a mono- or di-lower alkyl substituted amino group, a carboxyl group, or a lower alkoxycarbonyl group, and n represents an integer of 2 to 12:

(5) an intermediate represented by the following formula IV for synthesizing the amide derivative of formula I:

where in the formula IV, where  $R_3$  is a hydrogen atom,  $R_{10}$  represents an alkanyl group having 1 to 8 carbon atoms of a carbon chain that may have a branched chain, a haloalkanyl group having 1 to 8 carbon atoms of a carbon chain that may have a branched chain, a phenylalkanyl group having 1 to 8 carbon atoms of a carbon chain, whose benzene ring may be substituted with halogen, a nitro group, or a methoxy group, a phenoxyalkanyl group having 1 to 8 carbon atoms of a carbon chain, whose benzene ring may be substituted with halogen, a nitro group, or a methoxy group, an alkoxyalkanyl group having 1 to 8 carbon atoms of a carbon chain that may have a branched chain, a haloalkoxyalkanyl group having 1 to 8 carbon atoms of a carbon chain that may have a branched chain, or a phenylalkoxyalkanyl group having 1 to 8 carbon atoms of a carbon chain, whose benzene ring may be substituted with halogen, a nitro group, or a methoxy group,  $R_9$  and  $R_{10}$  may form an aromatic cyclic imide together that may be substituted with halogen, a nitro group or a methoxy group,  $R_8$  represents a phenyl group that may be substituted, a lower alkyl group that may be substituted with a phenyl group, a phenoxy group, a benzyloxy group, a lower alkoxy group, an amino group, a mono- or di-lower alkyl substituted amino group, a carbonyl group, or a lower alkoxy carbonyl group, and  $n$  represents an integer of 2 to 12.

(6) an intermediate represented by the following formula V for synthesizing the amide derivative of formula I:

where in the formula V, when R<sub>9</sub> is a hydrogen atom, R<sub>10</sub> represents an alkanoyl group having 1 to 8 carbon atoms of a carbon chain that may have a branched chain, a haloalkanoyl group having 1 to 8 carbon atoms of a carbon

chain that may have a branched chain, a phenylalkanoyl group having 1 to 8 carbon atoms of a carbon chain, whose benzene ring may be substituted with halogen, a nitro group, or a methoxy group, a phenoxyalkanoyl group having 1 to 8 carbon atoms of a carbon chain, whose benzene ring may be substituted with halogen, a nitro group, or a methoxy group, an alkoxyalkanoyl group having 1 to 8 carbon atoms of a carbon chain that may have a branched chain, a haloalkoxyalkanoyl group having 1 to 8 carbon atoms of a carbon chain that may have a branched chain, or a phenylalkoxyalkanoyl group having 1 to 8 carbon atoms of a carbon chain, whose benzene ring may be substituted with halogen, a nitro group, or a methoxy group,  $R_9$  and  $R_{10}$  may form an aromatic cyclic imide together that may be substituted with halogen, a nitro group or a methoxy group,  $R_3$  represents a phenyl group that may be substituted, a lower alkyl group that may be substituted with a phenyl group, a phenoxy group, a benzyloxy group, a lower alkoxy group, an amino group, a mono- or di-lower alkyl substituted amino group, a carboxyl group, or a lower alkoxyalkanoyl group, and  $n$  represents an integer of 2 to 12;

(7) an intermediate represented by the following formula VI for synthesizing the amide derivative of formula I:

where in the formula VI, when  $R_9$  is a hydrogen atom,  $R_{10}$  represents an alkanoyl group having 1 to 8 carbon atoms of a carbon chain that may have a branched chain, a haloalkanoyl group having 1 to 8 carbon atoms of a carbon chain that may have a branched chain, a phenylalkanoyl group having 1 to 8 carbon atoms of a carbon chain, whose benzene ring may be substituted with halogen, a nitro group, or a methoxy group, a phenoxyalkanoyl group having 1 to 8 carbon atoms of a carbon chain, whose benzene ring may be substituted with halogen, a nitro group, or a methoxy group, an alkoxyalkanoyl group having 1 to 8 carbon atoms of a carbon chain that may have a branched chain a haloalkoxyalkanoyl group having 1 to 8 carbon atoms of a carbon chain that may have a branched chain, or a phenylalkoxyalkanoyl group having 1 to 8 carbon atoms of a carbon chain, whose benzene ring may be substituted with halogen, a nitro group, or a methoxy group,  $R_9$  and  $R_{10}$  may form an aromatic cyclic imide together that may be substituted with halogen, a nitro group or a methoxy group,  $R_3$  represents a hydrogen atom, a phenyl group that may be substituted, a lower alkyl group that may be substituted with a phenyl group, a phenoxy group, a benzyloxy group, a lower alkoxy group, an amino group, a mono- or di-lower alkyl substituted amino group, a carboxyl group, or a lower alkoxyalkanoyl group, and  $n$  represents an integer of 2 to 12;

(8) an intermediate represented by the following formula VII for synthesizing the amide derivative of formula I:

where in the formula VII, when  $R_9$  is a hydrogen atom,  $R_{10}$  represents an alkanoyl group having 1 to 8 carbon atoms of a carbon chain that may have a branched chain, a haloalkanoyl group having 1 to 8 carbon atoms of a carbon chain that may have a branched chain, a phenylalkanoyl group having 1 to 8 carbon atoms of a carbon chain, whose benzene ring may be substituted with halogen, a nitro group, or a methoxy group, a phenoxyalkanoyl group having 1 to 8 carbon atoms of a carbon chain, whose benzene ring may be substituted with halogen, a nitro

group, or a methoxy group, an alkoxycarbonyl group having 1 to 8 carbon atoms of a carbon chain that may have a branched chain, a haloalkoxycarbonyl group having 1 to 8 carbon atoms of a carbon chain that may have a branched chain, or a phenylalkoxycarbonyl group having 1 to 8 carbon atoms of a carbon chain, whose benzene ring may be substituted with halogen, a nitro group, or a methoxy group,  $R_9$  and  $R_{10}$  may form an aromatic cyclic imide together that may be substituted with halogen, a nitro group or a methoxy group,  $R_9$  represents a hydrogen atom, a phenyl group that may be substituted, a lower alkyl group that may be substituted with a phenyl group, a phenoxy group, a benzyloxy group, a lower alkoxy group, an amino group, a mono- or di-lower alkyl substituted amino group, a carboxyl group, or a lower alkoxycarbonyl group, and  $n$  represents an integer of 2 to 12;  
 (9) an intermediate represented by the following formula VIII for synthesizing the amide derivative of formula I:

where in the formula VIII, when  $R_9$  is a hydrogen atom,  $R_{10}$  represents an alkanoyl group having 1 to 8 carbon atoms of a carbon chain that may have a branched chain, a haloalkanoyl group having 1 to 8 carbon atoms of a carbon chain that may have a branched chain, a phenylalkanoyl group having 1 to 8 carbon atoms of a carbon chain, whose benzene ring may be substituted with halogen, a nitro group, or a methoxy group, an alkoxycarbonyl group having 1 to 8 carbon atoms of a carbon chain that may have a branched chain, a haloalkoxycarbonyl group having 1 to 8 carbon atoms of a carbon chain that may have a branched chain, or a phenylalkoxycarbonyl group having 1 to 8 carbon atoms of a carbon chain, whose benzene ring may be substituted with halogen, a nitro group, or a methoxy group,  $R_9$  and  $R_{10}$  may form an aromatic cyclic imide together that may be substituted with halogen, a nitro group or a methoxy group,  $R_9$  represents a hydrogen atom, a phenyl group that may be substituted, a lower alkyl group that may be substituted with a phenyl group, a phenoxy group, a benzyloxy group, a lower alkoxy group, an amino group, a mono- or di-lower alkyl substituted amino group, a carboxyl group, or a lower alkoxycarbonyl group, and  $n$  represents an integer of 2 to 12; and  
 (10) an intermediate represented by the following formula IX for synthesizing the amide derivative of formula I:

where in the formula IX, when  $R_9$  is a hydrogen atom,  $R_{10}$  represents an alkanoyl group having 1 to 8 carbon atoms of a carbon chain that may have a branched chain, a haloalkanoyl group having 1 to 8 carbon atoms of a carbon chain that may have a branched chain, a phenylalkanoyl group having 1 to 8 carbon atoms of a carbon chain, whose benzene ring may be substituted with halogen, a nitro group, or a methoxy group, an alkoxycarbonyl group having 1 to 8 carbon atoms of a carbon chain that may have a branched chain, a haloalkoxycarbonyl group having 1 to 8 carbon atoms of a carbon chain that may have a branched chain, or a phenylalkoxycarbonyl group having 1 to 8 carbon atoms of a carbon chain, whose benzene ring may be substituted with halogen, a nitro group, or a methoxy group,  $R_9$  and  $R_{10}$  may form an aromatic cyclic imide together that may be substituted with halogen, a nitro group or a methoxy group, and  $n$  represents an integer of 2 to 12.

[0007] In formulae IV, V, VI, VII, VIII, and IX,  $R_9$  and  $R_{10}$  are protective groups of an amino group and preferred exem-

ples include acetyl, propionyl, pivaloyl, benzoyl, methoxycarbonyl, ethoxycarbonyl, isobutoxycarbonyl, tert-butoxycarbonyl, benzyloxycarbonyl, phthalimide, etc. The pharmaceutically acceptable acid addition salts of the compound of formula I include salts of mineral acids such as hydrochloric acid, hydrobromic acid, sulfuric acid, nitric acid, or phosphoric acid, and organic acids such as acetic acid, lactic acid, maleic acid, fumaric acid, citric acid, malic acid, tartaric acid, oxalic acid, methanesulfonic acid, or p-toluenesulfonic acid. These can be prepared by a conventional method.

[0008] The novel amide derivatives of the present invention represented by formula I can be produced by, for example, the following reaction scheme:

[0009] In the step (1), 2,4-dichloro-3-nitroquinoline of formula X, which is a starting compound, is known and can be synthesized by the method of Gaburiel (Chem. Ber., 1918, 51, 1500), etc. The monoamino-protected form of alkylene diamine represented by formula XI can also be synthesized by a known method (Synth. Commun., 1990, 20, 2559, J. Med. Chem., 1988, 31, 898, J. Org. Chem., 1981, 46, 2455, J. Amer. Chem. Soc., 1941, 63, 852, etc.). The compound of formula X is reacted with the compound of formula XI by heating in an appropriate solvent (preferably a basic solvent such as triethylamine or pyridine) to obtain the compound of formula XII. Alternatively, alkylene diamine in place of the compound of formula XI is reacted with the compound of formula X and a primary amino group of the resulting product is protected to produce the compound of formula XII.

[0010] In the step (2), the nitro group can be reduced with iron powder-hydrochloric acid or tin chloride (II) in an appropriate solvent (preferably alcohol) at 0°C to a reflux temperature. Alternatively, the compound of formula XIII can be obtained by contact reduction reaction by hydrogen in the presence of a catalyst such as palladium or platinum.

[0011] In the step (3), the compound of formula V' can be obtained by heating the compound of formula XIII in the presence of ortho ester of carboxylic acid represented by  $R_3CO_2H$  (wherein  $R_3$  is as defined above) or  $R_3C(OR_{11})_3$  (wherein  $R_3$  is as defined above and  $R_{11}$  represents a lower alkyl group) without solvent or in an appropriate solvent (for example, benzene, toluene, xylene, etc.).

[0012] In the step (4), appropriate reaction conditions for deprotection of the amino-protective group of the compound of formula V' can be selected depending on the type of the protective group. For example, the compound of formula III' can be obtained by using trifluoroacetic acid in an appropriate solvent when the protective group is tert-butoxycarbonyl (Boc) and by using hydrobromide-acetic acid when the protective group is benzyloxycarbonyl (Z).

[0013] In the step (5), the compound of formula V' is heated with benzylamine in an appropriate solvent or with an excess amount of benzylamine without a solvent to obtain the compound of formula IV'.

[0014] In the step (6), the compound of formula III' is reacted with ammonia in an alcoholic solvent or concentrated aqueous ammonium under heating in an autoclave (pressure-resistant steel cylinder) to obtain the compound of II'.

[0015] In the step (7), the compound of formula II' can be obtained by heating the compound in carboxylic acid (preferably formic acid) with palladium hydroxide on a carbon carrier. In this case, when the protection group of N represented by  $R_9$  and  $R_{10}$  is remained, deprotection is further performed in the same manner as in the step (4).

[0016] In the step (8), reduction of the nitro group and dechlorination can be performed by contact hydrogenation in the presence of an appropriate catalyst such as palladium or platinum.

[0017] The step (9) can be performed in the same manner as in the step (3).

[0018] In the step (10), the formation of an N-oxide can be performed with peracid or hydrogen peroxide in an appropriate solvent (preferably acetic acid or lower alcohol) at an appropriate temperature (for example, 0 °C to a reflux temperature of the solvent).

[0019] In the step (11), the N-oxide compound of formula VII is reacted with an acylating agent (preferably p-toluenesulfonyl chloride, benzenesulfonyl chloride, and methanesulfonyl chloride) and an aminating agent (for example, concentrated aqueous ammonium, ammonium carbonate, etc.) in an appropriate solvent (for example, dichloromethane, chloroform, toluene, etc.) at an appropriate temperature (for example, -20°C to a reflux temperature of the solvent) to obtain the compound of formula VI.

[0020] The step (12) can be performed in the same manner as in the step (4).

[0021] In the step (13), a reaction between the compound of formula XIV and the compound of formula II' can be performed to be led to the compound of formula I, which is performed by condensation in the presence of an appropriate condensing agent by an appropriate condensation method (for example, the carbodiimide method, the acid anhydride mixture method, the acid chloride method, etc.), in an appropriate solvent (for example, N,N-dimethylformamide, dimethylsulfoxide, chloroform, methylene chloride, toluene, benzene, tetrahydrofuran, dioxane, acetonitrile, alcohol, water, etc.).

[0022] 4-Chloro-3-nitroquinoline can be used as a starting compound in place of the compound of formula X (2,4-dichloro-3-nitroquinoline). This compound can be readily obtained by a known method (U.S. Patent No. 3,700,674) and the compound of formula IX can be led through the steps (1) and (8).

[0023] The synthetic intermediates represented by formula XIV are mostly novel compounds; some of them are known compounds. These can be readily produced by methods of usual organic synthetic chemistry.

[0024] The synthetic intermediates represented by formula XIV are mostly novel compounds; some of them are known compounds. These can be readily produced by methods of usual organic synthetic chemistry. For example,

when X in formula XIV is O, S(O)<sub>p</sub> (wherein p has the same meaning as defined above) or N R<sub>4</sub> (R<sub>4</sub> has the same meaning as defined above), the compound of formula XV, wherein M is a releasing group (for example, halogen, methanesulfonyloxy, p-toluenesulfonyloxy, etc.) and R<sub>1</sub>, R<sub>2</sub>, and g have the same meaning as defined above, is reacted with the compound of formula XVI, wherein R<sub>12</sub> represents hydrogen or a lower alkyl group, i, j, k, l, and m have the same meaning as defined above, in the presence of an appropriate base in an appropriate solvent, and then, the synthetic intermediates are obtained by, if necessary, hydrolyzing the ester moiety of the resulting product. Similarly, the desired compound can be obtained by reacting the compound of formula XVII, wherein R<sub>1</sub>, R<sub>2</sub>, and g have the same meaning as defined above, with the compound of formula XVIII, wherein M represents a releasing group (for example, halogen, methanesulfonyloxy, p-toluenesulfonyloxy, etc.), R<sub>12</sub> represents hydrogen or a lower alkyl group, and i, j, k, l, and m have the same meaning as defined above.

[0025] For example, when Y in formula XIV is CH=CF<sub>6</sub>, wherein R<sub>6</sub> has the same meaning as defined above, and K is O, the desired compound can also be obtained by reacting the compound of formula XIX, wherein L represents halogen, and R<sub>1</sub>, R<sub>2</sub>, g, h, and i have the same meaning as defined above, with the compound of formula XX, wherein R<sub>12</sub> represents hydrogen or a lower alkyl group, and R<sub>6</sub>, l, and m have the same meaning as defined above, in the presence of an appropriate base in an appropriate solvent, and then, if necessary by hydrolyzing, the ester moiety of the resulting product. Alternatively, a Grignard reagent represented by formula XXI, wherein L is halogen and R<sub>6</sub> has the same meaning as defined above, is reacted with the compound of formula XXII, wherein R<sub>12</sub> represents hydrogen or a lower alkyl group, and R<sub>1</sub>, R<sub>2</sub>, g, h, i, l, and m have the same meaning as defined above, and the resulting product is dehydrated with acid or the like, if necessary, followed by hydrolyzing the ester moiety to obtain the desired compound.

[0026] Examples of the appropriate solvents as described above include N,N-dimethylformamide, dimethylsulfoxide, chloroform, methylene chloride, benzene, toluene, xylene, tetrahydrofuran, dioxane, diethyl ether, acetonitrile, alcohol, and water. The appropriate base includes, for example, sodium hydrogencarbonate, potassium carbonate, triethylamine, pyridine, sodium hydride, metal sodium, t-butoxy potassium, and n-butyl lithium. The starting compounds represented by formulae XV, XVI, XVII, XVIII, XIX, XX, XXI, and XXII are novel compounds that can be readily synthesized using commercially available compounds or known compounds by a known method. As described above, the synthetic intermediates represented by formula XIV can be readily synthesized by the combination of known reactions. The compounds of formula XIV can be isolated in the form of a salt (for example, hydrochloride, hydrobromide, an organic acid salt, etc.), which is subjected to the reaction of the step (8).

[0027] Many of the amide derivatives represented by formula I and their salts of the present invention are racemic mixtures, which have an asymmetric carbon atom in the molecule. If required, the respective optically active compounds can be used after isolated by optical resolution, asymmetric synthesis or the like methods.

[0028] The term "lower alkyl" used herein means an alkyl group having 1 to 8 carbon atoms of a carbon chain that may be a branched chain or may form a ring.

[0029] The amide derivatives represented by formula I or pharmaceutically acceptable acid addition salts thereof of the present invention can be orally or parenterally administered to mammalian animals as a therapeutic agent for atopic dermatitis. The dosage form of the pharmaceutical composition for oral administration includes tablets, capsules, powders, fine powders, granules, suspension, emulsion, liquid, and syrup. The dosage form for parenteral administration includes injections, suppositories, inhalants, ophthalmic solution, collanarium, ointments, cream, lotion, and patches. Into any of the above dosage forms, appropriate medically and acceptable additives can be added upon formulation. Examples of the additives include excipients, binders, lubricants, disintegrating agents, diluents, flavors, colorants, dissolving agents, suspension media, emulsifiers, preservatives, buffering agents, isotonicizing agents, ointment base, oils, dissolving adjuvants, absorbents, adhesives, and atomizing media. Since the compounds of formula I and their acid addition salts are excellent in percutaneous adsorbability, it is preferably formulated into compositions for percutaneous administration such as ointments, lotion, or cream.

[0030] The compounds of formula I and their acid addition salts show an eosinophilic leukocyte infiltration suppressing activity. They are thus suggested to be useful for therapy of other diseases, for which the activity is effective, such as allergic rhinitis, urticaria, pemphigoid, eosinophilic pustular folliculitis, and asthma. Furthermore, since they strongly induce interferon α and γ, they are useful for therapy of various cancerous diseases such as multiple myeloma, kidney cancer, malignant ephyma, urinary bladder cancer, hairy cell leukemia, or chronic myelocytic leukemia, and chronic rheumatism. They are also useful for various viral diseases such as active chronic hepatitis types B and C, herpes simplex keratitis, genital wart, condyloma acuminatum, herpes zoster, AIDS.

#### BEST MODE FOR IMPLEMENTING THE INVENTION

[0031] The present invention will be described below in more detail with reference to examples. Spectroscopic data of the compounds synthesized in the examples were measured with Nippon Bunko IR-810 or FT/IR-350 for IR spectra and with Varian Unity 400 NMR Apparatus for <sup>1</sup>H-NMR spectra.

## Production Example 1

 $\alpha$ -(2-dimethylaminoethoxy)- $\alpha$ -phenyl-p-toluic acid

5 [0032]

(1) 25.2 g (154 mmol) of methyl terephthalate aldehyde was dissolved in 200 ml of tetrahydrofuran. 51.2 ml (154 mmol) of a 2M ether solution of phenyl magnesium bromide was added dropwise thereto under cooling in a sodium chloride-ice bath with stirring for 12 minutes and the mixture was stirred for further 20 minutes. Dilute hydrochloric acid was added to the resulting reaction mixture, then the obtained mixture was extracted twice with ethyl acetate. After the organic phase was washed with brine and dried ( $\text{MgSO}_4$ ), the solvent was distilled off. The resulting residue was purified by silica gel column chromatography (n-hexane:ethyl acetate = 6:1 (v/v)) to obtain 31.7 g (131 mmol) of methyl  $\alpha$ -hydroxy- $\alpha$ -phenyl-p-toluate as a pale yellow oily substance. Its spectroscopic data are as follows:

15  $^1\text{H-NMR}$  ( $\text{CDCl}_3$ )  $\delta$  (ppm) : 2.32 (1H, br), 3.90 (3H, s), 5.89 (1H, s), 7.26–7.38 (5H, m), 7.47 (2H, d,  $J=8.0\text{Hz}$ ), 8.00 (2H, d,  $J=8.4\text{Hz}$ ).

(2) 4.66 g (19.23 mmol) of methyl  $\alpha$ -hydroxy- $\alpha$ -phenyl-p-toluate was dissolved in 50 ml of N,N-dimethylformamide. 0.77 g (19.23 mmol) of 60% sodium hydride was added thereto and the mixture was stirred at room temperature for 1 hour. 3.10 g (28.85 mmol) of 2-dimethylaminoethyl chloride was added thereto and the mixture was heated at  $80^\circ\text{C}$  for 2.5 hours. After the reaction mixture was cooled and poured into water, the obtained mixture was extracted twice with ethyl acetate and the extract was washed with brine, and dried ( $\text{MgSO}_4$ ). The solvent was distilled off and the resulting residue was purified by silica gel column chromatography (chloroform:methanol = 40:1 (v/v)) to obtain 0.53 g (1.69 mmol) of methyl  $\alpha$ -(2-dimethylaminoethoxy)- $\alpha$ -phenyl-p-toluate as a brown oily substance. Its spectroscopic data are as follows:

25  $^1\text{H-NMR}$  ( $\text{CDCl}_3$ )  $\delta$  (ppm) : 2.26 (6H, s), 2.60 (2H, t,  $J=6.0\text{Hz}$ ), 3.56 (2H, td,  $J=6.0\text{Hz}$ , 2.0Hz), 3.89 (3H, s), 5.40 (1H, s), 7.22–7.35 (5H, m), 7.43 (2H, d,  $J=8.4\text{Hz}$ ), 7.98 (2H, d,  $J=8.0\text{Hz}$ ).

(3) 0.53 g (1.69 mmol) of methyl  $\alpha$ -(2-dimethylaminoethoxy)- $\alpha$ -phenyl-p-toluate was dissolved in 10 ml of methanol. 2.54 ml of a 1N sodium hydroxide aqueous solution was added thereto and the mixture was refluxed under heating for 1 hour. After the reaction mixture was cooled, 2.54 ml of 1N hydrochloric acid was added thereto and the mixture was concentrated to dryness. A mixture of chloroform and methanol (5:1 (v/v)) was added to the residue, and the resulting mixture was stirred for a while, then filtered with Celite. The solvent was distilled off and the residue was triturated with diethyl ether. The resulting precipitate was collected by filtration to obtain 0.44 g (1.47 mmol) of  $\alpha$ -(2-dimethylaminoethoxy)- $\alpha$ -phenyl-p-toluic acid as pale yellow brown powder.

40

45

Its spectroscopic data are as follows:

50  $^1\text{H-NMR}$  ( $\text{CDCl}_3$ )  $\delta$  (ppm) : 2.62 (6H, s), 3.00 (2H, m), 3.59 (1H, m), 3.82 (1H, m), 5.37 (1H, s), 7.21–7.36 (7H, m), 7.77 (2H, d,  $J=8.4\text{Hz}$ ).

55

## Production Example 2

3-[4- $\alpha$ -(2-dimethylaminoethoxy)benzyl]phenyl]propionic acid

[0033]

(1) 30 ml of 10% hydrochloride-methanol was added to 2.35 g (13.34 mmol) of 4-formylcinnamic acid and the mixture was stirred overnight. The solvent was distilled off under reduced pressure. The residue was dissolved in ethyl acetate and the resulting solution was washed with sodium hydrogencarbonate and brine. The organic phase was dried (over  $\text{MgSO}_4$ ) and the solvent was distilled off. The resulting residue was dissolved in 22 ml of tetrahydrofuran. 4.36 ml (13.09 mmol) of a 3M ether solution of phenyl magnesium bromide was added dropwise to the mixture for three minutes under cooling in a sodium chloride-ice bath and the resulting mixture was stirred for further 20 minutes. After 1N hydrochloric acid was added to the reaction mixture, the resulting mixture was extracted twice with ethyl acetate. The extract was washed with brine and dried ( $\text{MgSO}_4$ ). The solvent was distilled off and the resulting residue was purified by silica gel column chromatography (n-hexane:ethyl acetate = 8:1 to 4:1 (v/v)) to obtain 3.04 g (11.33 mmol) of methyl 4-( $\alpha$ -hydroxybenzyl)cinnamate as a faint yellow solid. Its spectroscopic data are as follows:

$^1\text{H-NMR}$  ( $\text{CDCl}_3$ )  $\delta$  (ppm) : 2.27 (1H, d, J=3.2Hz), 3.80 (3H, s), 5.85 (1H, d, J=3.6Hz), 6.41 (1H, d, J=15.6Hz) 7.26–7.39 (5H, m), 7.41 (2H, d, J=8.4Hz), 7.49 (2H, d, J=8.4Hz), 7.67 (1H, d, J=16.4Hz).

(2) 3.04 g (11.33 mmol) of methyl 4-( $\alpha$ -hydroxybenzyl)cinnamate was dissolved in 35 ml of N,N-dimethylformamide, thereafter 0.45 g (11.33 mmol) of 60% sodium hydride was added thereto, and the mixture was stirred overnight at room temperature. 2.44 g (22.66 mmol) of 2-dimethylaminoethyl chloride was then added thereto. The resulting mixture was heated at 80°C and stirred for 5 hours. After cooling, the reaction mixture was poured into water, the obtained mixture was extracted twice with ethyl acetate, and the extract was washed with brine. The organic phase was dried ( $\text{MgSO}_4$ ) and the solvent was distilled off. The resulting residue was purified by silica gel column chromatography (chloroform:methanol = 50:1 (v/v)) followed by alumina column chromatography (n-hexane:ethyl acetate = 5:1. (v/v)) to obtain 0.19 g (0.560 mmol) of methyl 4-[ $\alpha$ -(2-dimethylaminoethoxy)benzyl]cinnamate as a pale yellow oily substance. Its spectroscopic data are as follows:

$^1\text{H-NMR}$  ( $\text{CDCl}_3$ )  $\delta$  (ppm) : 2.27 (6H, s), 2.60 (2H, t, J=6.0Hz), 3.56 (2H, t, J=6.0Hz), 3.79 (3H, s), 5.37 (1H, s), 6.40 (1H, d, J=16.4Hz), 7.22–7.36 (5H, m), 7.37 (2H, d, J=8.0Hz), 7.47 (2H, d, J=8.0Hz), 7.66 (1H, d, J=16.0Hz).

(3) 0.19 g (0.560 mmol) of methyl 4-[ $\alpha$ -(2-dimethylaminoethoxy)benzyl]cinnamate was dissolved in 4 ml of methanol and 13 mg (0.056 mmol) of nickel chloride hexahydrate was then added. Forty-two mg (1.12 mmol) of sodium boronhydride was further added thereto under ice-cooling in divided portions for 1 hour and stirred for further 45 minutes. The reaction mixture was filtered and the filtrate was concentrated. The resulting residue was dissolved in chloroform and washed with water and brine. After the organic phase was dried ( $\text{MgSO}_4$ ), the solvent was distilled off and the residue was purified by silica gel column chromatography (chloroform:methanol = 50:1 (v/v)) to obtain 0.10 g (0.293 mmol) of methyl 3-[4- $\alpha$ -(2-dimethylaminoethoxy)benzyl]phenyl]propionate as a colorless oily substance. Its spectroscopic data are as follows:

$^1\text{H-NMR}$  ( $\text{CDCl}_3$ )  $\delta$  (ppm) : 2.26 (6H, s), 2.59 (2H, t, J=6.0Hz), 2.60 (2H, t, J=7.8Hz), 2.91 (2H, t, J=7.8Hz), 3.55 (2H, t, J=6.2Hz), 3.66 (3H, s), 5.33 (1H, s), 7.13 (2H, d, J=8.0Hz), 7.20–7.36 (7H, m).

(4) 0.10 g (0.293 mmol) of methyl 3-[4- $\alpha$ -(2-dimethylaminoethoxy)benzyl]phenyl] propionate (0.10 g, 0.293 mmol) was dissolved in 2.5 ml of methanol, 0.44 ml of a 1N sodium hydroxide aqueous solution was added, and the resulting mixture was stirred overnight at room temperature. 0.44 ml of 1N Hydrochloric acid was added to the reaction mixture and the obtained mixture was concentrated to dryness. After a chloroform-methanol mixed solution (5:1 (v/v)) was added to the residue, the resulting mixture was stirred for a while and filtered with Celite. The filtrate was concentrated and the residue was purified by silica gel column chromatography (chloroform:methanol = 4:1 (v/v)) to obtain 77 mg (0.235 mmol) of 3-[4- $\alpha$ -(2-dimethylaminoethoxy)benzyl]phenyl]propionic acid as a faint yellow gummy solid.

Its spectroscopic data are as follows:

<sup>1</sup>H-NMR (CDCl<sub>3</sub>) δ (ppm) : 2.33 (2H, m), 2.49 (6H, s), 2.75 (2H, m), 2.86 (2H, m), 3.52 (1H, m), 3.66 (1H, m), 5.29 (1H, s), 7.13 (2H, d, J=8.0Hz), 7.19–7.35 (7H, m).

### Production Example 3

#### α-(2-dimethylaminoethoxy)-α-phenyl-m-toluic acid

[0034]

(1) 25 ml of 10% hydrogen chloride-methanol was added to 1.95 g (8.62 mmol) of 3-benzoylbenzoic acid and the mixture was stirred overnight at room temperature. The reaction mixture was concentrated under reduced pressure. The resulting residue was dissolved in ethyl acetate, washed with a sodium hydrogencarbonate aqueous solution and brine, and dried (MgSO<sub>4</sub>). The solvent was distilled off and the residue was dissolved in 20 ml of methanol. Under ice-cooling, 0.32 g (8.41 mmol) of sodium boronhydride was added thereto and the mixture was stirred for 30 minutes. After acetone and 1N hydrochloric acid were added, the reaction mixture was extracted twice with chloroform, the extract was washed with a sodium hydrogencarbonate aqueous solution, and dried (MgSO<sub>4</sub>). The solvent was distilled off to obtain 2.04 g (8.42 mmol) of methyl α-hydroxy-α-phenyl-m-toluate as a colorless oily substance. Its spectroscopic data are as follows:

<sup>1</sup>H-NMR (CDCl<sub>3</sub>) δ (ppm) : 2.30 (1H, d, J=3.6Hz), 3.90 (3H, s), 5.90 (1H, d, J=3.6Hz), 7.27–7.39 (5H, m), 7.41 (1H, t, J=7.8Hz), 7.59 (1H, d, J=7.6Hz), 7.94 (1H, d, J=7.6Hz), 8.09 (1H, s).

(2) 0.48 g (1.53 mmol) of methyl α-(2-dimethylaminoethoxy)-α-phenyl-m-toluate was obtained from 2.04 g (8.42 mmol) of methyl α-hydroxy-α-phenyl-m-toluate in the same manner as in Production Example 1 (2) as a brown oily substance. Its spectroscopic data are as follows:

<sup>1</sup>H-NMR (CDCl<sub>3</sub>) δ (ppm) : 2.27 (6H, s), 2.60 (2 H, t, J=6.0Hz), 3.56 (2H, td, J=6.0Hz, 2.7Hz), 3.90 (3H, s), 5.41 (1H, s), 7.22–7.36 (5H, m), 7.38 (1H, t, J=7.8Hz), 7.55 (1H, d, J=7.6Hz), 7.91 (1H, d, J=7.6Hz), 8.04 (1H, s).

(3) 0.36 g (1.20 mmol) of α-(2-Dimethylaminoethoxy)-α-phenyl-m-toluic acid shown below was obtained as a deliquescent pale brown amorphous substance from 0.48 g (1.53 mmol) of methyl α-(2-dimethylaminoethoxy)-α-phenyl-m-toluate in the same manner as in Production Example 2 (4).

Its spectroscopic data are as follows:

<sup>1</sup>H-NMR (CDCl<sub>3</sub>) δ (ppm) : 2.61 (6H, s), 3.02 (2H, m), 3.71 (2H, m), 5.40 (1H, s), 7.16–7.36 (7H, m), 7.82 (1H, d, J=7.6Hz), 8.07 (1H, s).

## Production Example 4

 $\alpha$ -(3-Dimethylaminopropoxy)- $\alpha$ -phenyl-p-toluic acid

[0035]

(1) 50 mg (0.153 mmol) of methyl  $\alpha$ -(3-dimethylaminopropoxy)- $\alpha$ -phenyl-p-toluate was obtained as a pale brown oily substance from 2.42 g (10 mmol) of methyl  $\alpha$ -hydroxy- $\alpha$ -phenyl-p-toluate and 2.43 g (20 mmol) of 3-dimethylaminopropyl chloride in the same manner as in Production Example 1 (2). Its spectroscopic data are as follows:

$^1\text{H-NMR}$  ( $\text{CDCl}_3$ )  $\delta$  (ppm) : 1.83 (2H, m), 2.22 (6H, s), 2.40 (2H, t,  $J=7.4\text{Hz}$ ), 3.50 (2 H, t,  $J=6.4\text{Hz}$ ) 3.89 (3 H, s), 5.37 (1H, s), 7.22~7.34 (5H, m), 7.42 (2H, d,  $J=8.0\text{Hz}$ ), 7.98 (2H, d,  $J=8.4\text{Hz}$ ).

(2) 39 mg (0.124 mmol) of  $\alpha$ -(3-Dimethylaminopropoxy)- $\alpha$ -phenyl-p-toluic acid shown below was obtained as white powder from 50 mg (0.153 mmol) of methyl  $\alpha$ -(3-dimethylaminopropoxy)- $\alpha$ -phenyl-p-toluate in the same manner as in Production Example 2 (4).

Its spectroscopic data are as follows:

$^1\text{H-NMR}$  ( $\text{CDCl}_3$ )  $\delta$  (ppm) : 2.05 (2H, m), 2.64 (6H, s), 2.89 (1H, m), 3.04 (1H, m), 3.55 (2H, m), 5.37 (1H, s), 7.21~7.33 (5H, m), 7.35 (2H, d,  $J=8.0\text{Hz}$ ), 7.95 (2H, d,  $J=8.0\text{Hz}$ ).

## Production Example 5

 $\alpha$ -(2-Diethylaminoethoxy)- $\alpha$ -phenyl-p-toluic acid

[0036]

(1) 0.24 g (0.703 mmol) of methyl  $\alpha$ -(2-diethylaminoethoxy)- $\alpha$ -phenyl-p-toluate was obtained as a pale brown oily substance from 3.17 g (13.08 mmol) of methyl  $\alpha$ -hydroxy- $\alpha$ -phenyl-p-toluate and 2.66 g (19.61 mmol) of 2-diethylaminoethyl chloride in the same manner as in Production Example 1 (2). Its spectroscopic data are as follows:

$^1\text{H-NMR}$  ( $\text{CDCl}_3$ )  $\delta$  (ppm) : 1.01 (6H, t,  $J=7.2\text{Hz}$ ), 2.56 (4H, q,  $J=7.2\text{Hz}$ ), 2.76 (2H, t,  $J=6.4\text{Hz}$ ), 3.54 (2 H, t,  $J=6.4\text{Hz}$ ), 3.89 (3 H, s), 5.41 (1H, s), 7.22~7.34 (5H, m), 7.43 (2H, d,  $J=8.0\text{Hz}$ ), 7.98 (2H, d,  $J=8.8\text{Hz}$ , 8Hz).

(2) 0.20 g (0.611 mmol) of  $\alpha$ -(2-Diethylaminoethoxy)- $\alpha$ -phenyl-p-toluic acid (shown below was obtained as a pale yellow amorphous substance from 0.24 g (0.703 mmol) of methyl  $\alpha$ -(diethylaminoethoxy)- $\alpha$ -phenyl-p-toluate in the same manner as in Production Example 2 (4).

Its spectroscopic data are as follows:

<sup>1</sup>H-NMR (CDCl<sub>3</sub>) δ (ppm) : 1.27 (6H, t, J=7.2Hz), 3.14 (4H, q, J=7.2Hz), 3.20 (2H, t, J=5.4Hz), 3.68 (1H, m), 3.94 (1H, m), 5.39 (1H, s), 7.20–7.31 (5H, m), 7.32 (2H, d, J=8.0Hz), 7.84 (2H, d, J=8.4Hz).

#### 5 Production Example 6

##### α-(2-Dimethylaminoethoxy)-p-toluic acid

[0037]

10

(1) 0.48 g (2.02 mmol) of methyl α-(2-dimethylaminoethoxy)-p-toluate was obtained as a yellow oily substance using 4.71 g (28.34 mmol) of methyl 4-hydroxymethylbenzoate as a raw material in the same manner as in Production Example 2 (2). Its spectroscopic data are as follows:

<sup>1</sup>H-NMR (CDCl<sub>3</sub>) δ (ppm) : 2.27 (6H, s), 2.55 (2H, t, J=5.8Hz), 3.57 (2H, t, J=5.8Hz), 3.91 (3H, s), 4.59 (2H, s), 7.41 (2H, d, J=8.4Hz), 8.01 (2H, d, J=8.4Hz).

15

(2) 0.41 g (1.84 mmol) of α-(2-Dimethylaminoethoxy)-p-toluic acid shown below was obtained as a pale yellow solid from 0.48 g (2.02 mmol) of methyl α-(2-dimethylaminoethoxy)-p-toluate in the same manner as in Production Example 2 (4).

20

25

Its spectroscopic data are as follows:

<sup>1</sup>H-NMR (CDCl<sub>3</sub>) δ (ppm) : 2.64 (6 H, s), 2.99 (2H, t, J=5.4Hz), 3.73 (2H, t, J=5.2Hz), 4.56 (2H, s), 7.29 (2H, d, J=8.0Hz), 7.77 (2H, d, J=8.0Hz).

30

#### Production Example 7

35

##### 4-(2-Dimethylaminoethoxy)benzoic acid

[0038]

40

(1) 1.52 g (10 mmol) of methyl 4-hydroxybenzoate was dissolved in 40 ml of N,N-dimethylformamide and 2.16 g (15 mmol) of 2-dimethylaminoethyl chloride hydrochloride and 4.15 g (30 mmol) of potassium carbonate were further added. The mixture was heated at 80°C and stirred overnight. After cooling, water was added to the reaction mixture, the obtained mixture was extracted twice with ethyl acetate, and the extract was washed with brine. The organic phase was dried (Na<sub>2</sub>SO<sub>4</sub>) and the solvent was distilled off. The resulting residue was purified by silica gel column chromatography (chloroform:methanol = 70:1 to 15:1 (v/v)) to obtain 0.69 g (3.09 mmol) of methyl 4-(2-dimethylaminoethoxy)benzoate as a pale brown oily substance. Its spectroscopic data are as follows:

45

<sup>1</sup>H-NMR (CDCl<sub>3</sub>) δ (ppm): 2.34 (6H, s), 2.75 (2H, t, J=5.8Hz), 3.88 (3H, s), 4.12 (2H, t, J=5.6Hz), 6.93 (2H, d, J=9.2Hz), 7.98 (2H, d, J=9.2Hz).

50

(2) 0.69 g (3.09 mmol) of methyl 4-(2-dimethylaminoethoxy)benzoate was dissolved in 15 ml of methanol. 4.64 ml of a 1N sodium hydroxide aqueous solution was added thereto and the mixture was refluxed under heating for 3 hours. After cooling, 4.64 ml of 1N hydrochloric acid was added and the mixture was concentrated to dryness. A chloroform-methanol mixed solution (1:1 (v/v)) was added to the residue. The solution was stirred for a while and filtered with Celite. The solvent was distilled off under reduced pressure to obtain 0.65 g (3.09 mmol) of 4-(2-dimethylaminoethoxy)benzoic acid shown below as a pale yellow solid.

55

Its spectroscopic data are as follows:

$^1\text{H-NMR}$  ( $\text{DMSO}-d_6$ )  $\delta$  (ppm) : 2.27 (6H, s), 2.71 (2H, t,  $J=5.6\text{Hz}$ ), 4.14 (2H, t,  $J=5.8\text{Hz}$ ), 7.01 (2H, d,  $J=8.8\text{Hz}$ ), 7.88 (2H, d,  $J=9.2\text{Hz}$ ).

#### Production Example 8

##### 3-(2-Dimethylaminoethoxy)benzoic acid

[0039]

(1) 0.19 g (0.851 mmol) of methyl 3-(2-dimethylaminoethoxy) benzoate was obtained as a colorless oily substance using 1.52 g (10 mmol) of methyl 3-hydroxybenzoate as a starting material in the same manner as in Production Example 7 (1). Its spectroscopic data are as follows:

$^1\text{H-NMR}$  ( $\text{CDCl}_3$ )  $\delta$  (ppm) : 2.34 (6H, s), 2.75 (2H, t,  $J=5.8\text{Hz}$ ), 3.91 (3H, s), 4.11 (2H, t,  $J=5.6\text{Hz}$ ), 7.13 (1H, dd,  $J=8.4\text{Hz}$ ,  $2.8\text{Hz}$ ), 7.33 (1H, t,  $J=8.0\text{Hz}$ ), 7.58 (1H, d,  $J=2.4\text{Hz}$ ), 7.63 (1H, d,  $J=7.6\text{Hz}$ ).

(2) 0.18 g (0.851 mmol) of 3-(2-dimethylaminoethoxy)benzoic acid shown below was obtained as a deliquescent colorless amorphous substance from 0.19 g (0.851 mmol) of methyl 3-(2-dimethylaminoethoxy)benzoate in the same manner as in Production Example 7 (2).

Its spectroscopic data are as follows:

$^1\text{H-NMR}$  ( $\text{CDCl}_3+\text{CD}_3\text{OD}$ )  $\delta$  (ppm) : 2.75 (6H, s), 3.2 2 (2H, m), 4.34 (2H, t,  $J=4.8\text{Hz}$ ), 6.99 (1H, d,  $J=8.0\text{Hz}$ ), 7.30 (1H, t,  $J=7.8\text{Hz}$ ), 7.64 (1H, d,  $J=8.0\text{Hz}$ ), 7.68 (1H, s).

#### Production Example 9

##### 3-(2-dimethylaminoethoxy)phenyl]propionic acid

[0040]

(1) 20 ml of 10% hydrogen chloride-methanol was added to 1.64 g (10 mmol) of 3-hydroxycinnamic acid and the mixture was stirred at room temperature for one day. The reaction mixture was concentrated under reduced pressure. The residue was dissolved in ethyl acetate, washed twice with water and dried ( $\text{MgSO}_4$ ). The solvent was distilled off. The residue was dissolved in 25 ml of methanol, 0.5 g of 10% palladium-carbon was added and the mixture was stirred overnight under hydrogen atmosphere. The reaction mixture was filtered and the filtrate was concentrated. The resulting residue was purified by silica gel column chromatography (chloroform:methanol = 100:1 (v/v)) to obtain 1.75 g (9.71 mmol) of methyl 3-(3-hydroxyphenyl)propionate as a colorless oily substance. Its spectroscopic data are as follows:

$^1\text{H-NMR}$  ( $\text{CDCl}_3$ )  $\delta$  (ppm) : 2.62 (2H, t,  $J=7.8\text{Hz}$ ), 2.91 (2H, t,  $J=7.8\text{Hz}$ ), 3.68 (3H, s), 4.96 (1H, s), 6.68 (2H, m), 6.76 (1H, 3d,  $J=8.0\text{Hz}$ ), 7.15 (1H, t,  $J=8.2\text{Hz}$ ).

(2) 0.48 g (1.91 mmol) of methyl 3-(2-dimethylaminoethoxy)phenyl]propionate was obtained as a pale brown oily

substance from 1.75 g (9.71 mmol) of methyl 3-(3-hydroxyphenyl)propionate in the same manner as in Production Example 7 (1). Its spectroscopic data are as follows:

<sup>1</sup>H-NMR (CDCl<sub>3</sub>) δ (ppm): 2.33 (6H, s), 2.62 (2H, t, J=7.8Hz), 2.72 (2H, t, J=5.6Hz), 2.92 (2H, t, J=8.0Hz), 3.67 (3H, s), 4.05 (2H, t, J=6.0Hz), 6.74–6.80 (3H, m), 7.19 (1H, t, J=8.2Hz).

(3) 0.45 g (1.90 mmol) of 3-[3-(2-dimethylaminoethoxy)phenyl]propionic acid shown below was obtained as a faint yellow oily substance from 0.48 g (1.91 mmol) of methyl 3-[3-(2-dimethylaminoethoxy)phenyl]propionate in the same manner as in Production Example 7 (2).

Its spectroscopic data are as follows:

<sup>1</sup>H-NMR (CDCl<sub>3</sub>) δ (ppm): 2.50 (6H, s), 2.59 (2H, t, J=8.2Hz), 2.93 (2H, t, J=8.0Hz), 2.96 (2H, t, J=5.2Hz), 4.12 (2H, t, J=5.4Hz), 6.67 (1H, d, J=8.2Hz), 6.83 (1H, d, J=8.0Hz), 6.84 (1H, s), 7.17 (1H, t, J=8.2Hz).

#### Production Example 10

##### 3-[4-(2-Dimethylaminoethoxy)-3-methoxyphenyl]propionic acid

(1) 20 ml of 10% hydrogen chloride-methanol was added to 1.94 g (10 mmol) of ferulic acid and the mixture was stirred at room temperature for one day. After the reaction mixture was concentrated under reduced pressure, the residue was dissolved in ethyl acetate, washed twice with water, and dried (MgSO<sub>4</sub>). The solvent was distilled off. The resulting residue was dissolved in 25 ml of methanol. 0.5 g of 10% palladium-carbon was added thereto and the solution was stirred overnight under hydrogen atmosphere. The reaction mixture was filtered and the filtrate was concentrated. The residue was purified by silica gel column chromatography (n-hexane:ethyl acetate = 3:1 (v/v)) to obtain 1.86 g (8.85 mmol) of methyl 3-[4-hydroxy-3-methoxyphenyl]propionate as a colorless oily substance. Its spectroscopic data are as follows:

<sup>1</sup>H-NMR (CDCl<sub>3</sub>) δ (ppm): 2.60 (2H, t, J=7.6Hz), 2.88 (2H, t, J=7.6Hz), 3.67 (3H, s), 3.87 (3H, s), 5.48 (1H, s), 6.69 (1H, d, J=7.6Hz), 6.70 (1H, s), 6.83 (1H, d, J=8.0Hz).

(2) 0.44 g (1.56 mmol) of methyl 3-[4-(2-dimethylaminoethoxy)-3-methoxyphenyl]propionate was obtained as a brown oily substance from 1.86 g (8.85 mmol) of methyl 3-[4-hydroxy-3-methoxyphenyl]propionate in the same manner as in Production Example 7 (1). Its spectroscopic data are as follows:

<sup>1</sup>H-NMR (CDCl<sub>3</sub>) δ (ppm): 2.33 (6H, s), 2.61 (2H, t, J=7.8Hz), 2.76 (2H, t, J=6.2Hz), 2.89 (2H, t, J=7.6Hz), 3.67 (3H, s), 3.84 (3H, s), 4.08 (2H, t, J=6.2Hz), 6.71 (1H, d, J=7.6Hz), 6.72 (1H, s), 6.81 (1H, d, J=8.0Hz).

(3) 0.42 g (1.56 mmol) of 3-[4-(2-Dimethylaminoethoxy)-3-methoxyphenyl]propionic acid shown below was obtained as a reddish brown solid from 0.44 g (1.56 mmol) of methyl 3-[4-(2-dimethylaminoethoxy)-3-methoxyphenyl]propionate in the same manner as in Production Example 7 (2).

Its spectroscopic data are as follows:

<sup>1</sup>H-NMR (CDCl<sub>3</sub>) δ (ppm): 2.54 (6H, s), 2.57 (2H, t, J=7.0Hz), 2.89 (2H, t, J=6.8Hz), 3.05 (2H, t, J=5.4Hz), 3.79 (3H, s), 4.08 (2H, t, J=5.4Hz), 6.68 (1H, d, J=8.8Hz), 6.76 (1H, s), 6.77 (1H, d, J=6.4Hz).

## Production Example 11

6-(2-Dimethylaminoethoxy)-2-naphthoic acid

[0042]

(1) 15 ml of 10% hydrogen chloride-methanol was added to 1.0 g (5.31 mmol) of 6-hydroxy-2-naphthoic acid and the mixture was stirred at room temperature for one day. After the reaction mixture was concentrated under reduced pressure, the residue was dissolved in ethyl acetate, washed twice with water, and dried (MgSO<sub>4</sub>). The solvent was distilled off to obtain 1.07 g (5.29 mmol) of methyl 6-(2-dimethylaminoethoxy)-2-naphthoate as a pale yellowish brown powder. Its spectroscopic data are as follows:

<sup>1</sup>H-NMR (CDCl<sub>3</sub>) δ (ppm) : 3.97 (3H, s), 5.40 (1H, s), 7.14–7.19 (2H, m), 7.70 (1H, d, J=8.8Hz), 7.86 (1H, d, J=8.4Hz), 8.01 (1H, d, J=8.4Hz), 8.53 (1H, s). (2) 0.41 g (1.50 mmol) of methyl 6-(2-dimethylaminoethoxy)-2-naphthoate (was obtained as a pale brown solid from 1.07 g (5.29 mmol) of methyl 6-hydroxy-2-naphthoate in the same manner as in Production Example 7 (1). Its spectroscopic data are as follows:

<sup>1</sup>H-NMR (CDCl<sub>3</sub>) δ (ppm) : 2.37 (6H, s), 2.81 (2H, t, J=5.6Hz), 3.96 (3H, s), 4.21 (2H, t, J=5.6Hz), 7.16 (1H, d, J=2.4Hz), 7.23 (1H, dd, J=9.0Hz, 2.6Hz), 7.74 (1H, d, J=8.4Hz), 7.83 (1H, d, J=8.8Hz), 8.02 (1H, dd, J=8.6Hz, 1.8Hz), 8.52 (1H, s).

(3) 0.38 g (1.47 mmol) of 6-(2-Dimethylaminoethoxy)-2-naphthoic acid shown below was obtained as a pale yellow crystalline powder from 0.41 g (1.50 mmol) of methyl 6-(2-dimethylaminoethoxy)-2-naphthoate in the same manner as in Production Example 7 (2).

Its spectroscopic data are as follows:

<sup>1</sup>H-NMR (DMSO-d<sub>6</sub>) δ (ppm) : 2.33 (6H, s), 2.82 (2H, t, J=5.8Hz), 4.25 (2H, t, J=5.6Hz), 7.24 (1H, dd, J=9.2Hz, 2.4Hz), 7.42 (1H, d, J=2.4Hz), 7.86 (1H, d, J=8.8Hz), 7.93 (1H, dd, J=8.6Hz, 1.8Hz), 8.00 (1H, d, J=9.2Hz), 8.51 (1H, s).

## Production Example 12

4-[4-(2-dimethylaminoethoxy)phenyl]benzoic acid

[0043]

(1) 15 ml of 10% hydrogen chloride-methanol was added to 1.07 g (5.0 mmol) of 4-(4-hydroxyphenyl)benzoic acid and the mixture was refluxed under heating for 5 hours. After the reaction mixture was concentrated under reduced pressure, water was added thereto and the solution was extracted twice with a chloroform-methanol mixed solution (10:1 (v/v)). The extract was washed with a sodium hydrogencarbonate aqueous solution and dried (MgSO<sub>4</sub>). The solvent was distilled off to obtain 0.97 g (4.25 mmol) of methyl 4-(4-hydroxyphenyl)benzoate as a faint yellow powder. Its spectroscopic data are as follows:

<sup>1</sup>H-NMR (CDCl<sub>3</sub>) δ (ppm) : 3.93 (3H, s), 4.93 (1H, s), 6.93 (2H, dd, J=6.6Hz, 2.2Hz), 7.52 (2H, dd, J=6.6Hz, 2.2Hz), 7.61 (2H, dd, J=6.8Hz, 2.0Hz), 8.07 (2H, dd, J=6.8Hz, 2.0Hz).

(2) 0.69 g (2.30 mmol) of methyl 4-[4-(2-dimethylaminoethoxy)phenyl]benzoate was obtained as a faint yellow solid from 0.97 g (4.25 mmol) of methyl 4-(4-hydroxyphenyl)benzoate in the same manner as in Production Example 7 (1). Its spectroscopic data are as follows:

<sup>1</sup>H-NMR (CDCl<sub>3</sub>) δ (ppm) : 2.36 (6H, s), 2.76 (2H, t, J=5.8Hz), 3.93 (3H, s), 4.12 (2H, t, J=5.8Hz), 7.01 (2H, dd, J=8.8Hz), 7.56 (2H, d, J=8.8Hz), 7.62 (2H, d, J=8.8Hz), 8.07 (2H, d, J=8.8Hz).

(3) 0.68 g (2.27 mmol) of methyl 4-[4-(2-dimethylaminoethoxy)phenyl]benzoate was dissolved in 18 ml of methanol-

methylene chloride (5:1 (v/v)). 3.4 ml of a 1N sodium hydroxide aqueous solution was added thereto and the mixture was refluxed under heating for 5 hours. After cooling to room temperature, 3.4 ml of 1N hydrochloric acid was added and stirred. The precipitate thus formed was collected by filtration, washed, and dried to obtain 0.54 g (1.89 mmol) of 4-[4-(2-dimethylaminoethoxy)phenyl]benzoic acid as faint yellowish white powder.

Its spectroscopic data are as follows:

<sup>1</sup>H-NMR (DMSO-d<sub>6</sub>) δ (ppm): 2.24 (6H, s), 2.66 (2H, t, J=5.8Hz), 4.11 (2Ht, J=5.8Hz), 7.05 (2H, d, J=8.8Hz), 7.67 (2H, d, J=8.4Hz), 7.73 (2H, d, J=8.4Hz), 7.98 (2H, d, J=8.4Hz).

#### Production Example 13

##### 3-(4-dimethylaminophenyl)propionic acid

[0044]

(1) 0.37 g (1.79 mmol) of methyl 3-(4-dimethylaminophenyl) propionate was obtained as a colorless oily substance using 0.57 g (3.0 mmol) of p-dimethylaminocinnamic acid as a starting material in the same manner as in Production Example 10 (1). Its spectroscopic data are as follows:

<sup>1</sup>H-NMR (CDCl<sub>3</sub>) δ (ppm): 2.58 (2H, t, J=7.8Hz), 2.86 (2H, t, J=7.8Hz), 2.91 (6H, s), 3.67 (3H, s), 6.69 (2H, d, J=8.8Hz), 7.07 (2H, d, J=8.8Hz).

(2) 0.13 g (0.673 mmol) of 3-(4-dimethylaminophenyl)propionic acid shown below was obtained as a pale orange solid from 0.37 g (1.79 mmol) of methyl 3-(4-dimethylaminophenyl)propionate in the same manner as in Production Example 2 (4).

Its spectroscopic data are as follows:

<sup>1</sup>H-NMR (CDCl<sub>3</sub>) δ (ppm): 2.63 (2H, t, J=8.0Hz), 2.87 (2H, t, J=7.8Hz), 2.91 (6H, s), 6.70 (2H, d, J=8.8Hz), 7.09 (2H, d, J=8.8Hz).

#### Production Example 14

##### O-(2-dimethylaminoethyl)benzilic acid

[0045]

(1) 5.42 g (17.29 mmol) of methyl o-(2-dimethylaminoethyl)benzilate was obtained as a pale yellowish brown oily substance using 4.85 g (20 mmol) of methylbenzilic acid as a starting material in the same manner as in Production

Example 1 (2). Its spectroscopic data are as follows:

<sup>1</sup>H-NMR (CDCl<sub>3</sub>) δ (ppm) : 2.23 (6H, s), 2.55 (2H, t, J=6.0Hz), 3.36 (2H, t, J=6.0Hz), 3.76 (3H, s), 7.28–7.34 (6H, m), 7.40–7.45 (4H, m).

(2) 0.24 g (0.802 mmol) of o-(2-dimethylaminoethyl)benzoic acid shown below was obtained as a faint yellow solid from 0.31 g (1.0 mmol) of methyl o-(2-dimethylaminoethyl)benzoate in the same manner as in Production Example 2 (4).

Its spectroscopic data are as follows:

<sup>1</sup>H-NMR (CDCl<sub>3</sub>) δ (ppm) : 2.87 (6H, s), 3.09 (2H, t, J=4.8Hz), 3.51 (2H, t, J=4.8Hz), 7.21–7.30 (6H, m), 7.50–7.54 (4H, m).

#### Production Example 15

##### 4-(4-dimethylamino-1-phenyl-1-butenyl)benzoic acid

[0046]

(1) 2.97 g (6.93 mmol) of (3-dimethylaminopropyl) triphenylphosphonium bromide was dissolved in 25 ml of tetrahydrofuran and 4.77 ml (7.63 mmol) of 1.6 M n-butyl lithium was added dropwise thereto under cooling in a dry ice-acetone bath. The mixture was stirred for 30 minutes under ice-cooling. A solution of 1.67 g (6.93 mmol) of methyl p-benzoylbenzoate in 15 ml of tetrahydrofuran was added thereto and the mixture was stirred for 30 minutes. Returning to room temperature, it was stirred for one hour. After brine was added, the reaction mixture was extracted twice with ethyl acetate, the extract was washed with brine, and dried (Na<sub>2</sub>SO<sub>4</sub>). The solvent was distilled off and the residue was purified by silica gel column chromatography (chloroform:methanol = 100:1 to 15:1 (v/v)) to obtain 1.59 g (5.14 mmol) of methyl 4-(4-dimethylamino-1-phenyl-1-butenyl)benzoate as a pale brown oily substance. Its spectroscopic data are as follows:

<sup>1</sup>H-NMR (CDCl<sub>3</sub>) δ (ppm) : 2.18, 2.19 (6H, s×2), 2.2 9 (2H, m), 2.39 (2H, m), 3.89, 3.93 (3H, s×2), 6.14, 6.22 (1H, t×2, J=7.2Hz, 7.2Hz, ), 7.14–7.41 (7H, m), 7.91, 8.04 (2H, d×2, J=8.4Hz, 8.4Hz). (2) 0.59 g (2.0 mmol) of 4-(4-dimethylamino-1-phenyl-1-butenyl)benzoic acid (shown below was obtained as a pale brown amorphous substance from 0.62 g (2.0 mmol) of methyl 4-(4-dimethylamino-1-phenyl-1-butenyl)benzoate in the same manner as in Production Example 1 (3).

Its spectroscopic data are as follows:

<sup>1</sup>H-NMR (CDCl<sub>3</sub>) δ (ppm) : 2.40, 2.64 (2H, m×2), 2.88 (2H, m), 5.90, 6.39 (1H, t×2, J=7.4Hz, 7.4Hz), 7.12–7.28 (5H, m), 7.32, 7.39 (2H, t×2, J=7.2Hz, 7.2Hz, ), 7.57, 7.94 (2H, d×2, J=8.6Hz, 8.6Hz).

## Production Example 16

4-(4-dimethylamino-1-phenylbutyl)benzoic acid

- 5 [0047] 0.41 g (1.39 mmol) of 4-(4-Dimethylamino-1-phenyl-1-butenyl)benzoic acid obtained in the method of Production Example 15 was dissolved in 12 ml of a mixed solution of methanol-methylene chloride (5:1 (v/v)). 0.2 g of 10% palladium-carbon was added thereto and the mixture was stirred overnight under hydrogen atmosphere. The reaction mixture was filtered with Celite and the filtrate was concentrated under reduced pressure. The residue was triturated with diethyl ether and the precipitate was collected by filtration to obtain 0.40 g (1.34 mmol) of 4-(4-dimethylamino-1-phenylbutyl)benzoic acid shown below as a faint yellowish white powder.

Its spectroscopic data are as follows:

- 1H-NMR (CDCl<sub>3</sub>) δ (ppm) : 1.64 (1H, m), 1.73 (1H, m), 2.27 (1H, m), 2.58 (6H, s), 2.84 (2H, m), 3.95 (1H, m), 7.13~7.28 (7H, m), 7.80 (2H, d, J=8.0Hz).

## Production Example 17

4-[N-(2-dimethylaminoethyl)phenylamino]benzoic acid

30 [0048]

- (1) 30 ml of 10% hydrogen chloride-methanol was added to 1.59 g (7.46 mmol) of 4-(phenylamino)benzoic acid and the mixture was refluxed overnight under heating. After the reaction mixture was concentrated under reduced pressure, the residue was dissolved in ethyl acetate, washed with a sodium hydrogencarbonate aqueous solution and brine, and dried (MgSO<sub>4</sub>). The solvent was distilled off and the residue was purified by silica gel column chromatography (n-hexane:ethyl acetate = 5:1 (v/v)) to obtain 1.66 g (7.30 mmol) of methyl 4-(phenylamino)benzoate as a pale yellow solid. Its spectroscopic data are as follows:

- 1H-NMR (CDCl<sub>3</sub>) δ (ppm) : 3.87 (3H, s), 6.01 (1H, br), 6.98 (2H, d, J=9.2Hz), 7.07 (1H, t, J=7.2Hz), 7.17(2 H, d, J=7.6Hz), 7.34 (2H, t, J=8.0Hz), 7.91 (2H, d, J=8.8Hz).

- (2) 0.68 g (2.28 mmol) of methyl 4-[N-(2-dimethylaminoethyl)phenylamino]benzoate was obtained as a brown oily substance from 0.77 g (3.39 mmol) of methyl 4-(phenylamino)benzoate in the same manner as in Production Example 1 (2). Its spectroscopic data are as follows:

- 1H-NMR (CDCl<sub>3</sub>) δ (ppm) : 2.27 (6H, s), 2.58 (2H, t, J=7.8Hz), 3.85 (3H, s), 3.86 (2H, t, J=7.8Hz), 6.72 (2H, d, J=9.2Hz), 7.19~7.25 (3H, m), 7.40 (2H, t, J=7.8Hz), 7.83 (2H, d, J=9.2Hz).

- (3) 0.57 g (2.0 mmol) of 4-[N-(2-dimethylaminoethyl)phenylamino]benzoic acid was obtained as a faint yellowish brown powder from 0.60 g (2.01 mmol) of methyl 4-[N-(2-dimethylaminoethyl)phenylamino]benzoate in the same manner as in Production Example 1 (3). Its spectroscopic data are as follows:

- 1H-NMR (CDCl<sub>3</sub>) δ (ppm) : 2.39 (6H, s), 2.75 (2H, t, J=8.0Hz), 3.98 (2H, t, J=7.8Hz), 6.81 (2H, d, J=8.8Hz), 7.17~7.23 (3H, m), 7.39 (2H, t, J=8.0Hz), 7.89 (2H, d, J=8.8Hz).

## Production Example 18

4-[N-(3-dimethylaminopropyl)phenylamino]benzoic acid

55 [0049]

- (1) 0.90 g (2.88 mmol) of methyl 4-[N-(3-dimethylaminopropyl)phenylamino]benzoate was obtained as a pale

brown oily substance from 0.84 g (3.70 mmol) of methyl 4-(phenylamino)benzoate obtained by the method of Production Example 17 (1) and 0.67 g (5.54 mmol) of 3-dimethylaminopropyl chloride in the same manner as in Production Example 1 (2). Its spectroscopic data are as follows:

<sup>1</sup>H-NMR (CDCl<sub>3</sub>) δ (ppm): 1.82 (2H, m), 2.20 (6H, s), 2.30 (2H, t, J=7.0Hz), 3.79 (2H, t, J=7.6Hz), 3.85 (3H, s), 6.73 (2H, d, J=9.2Hz), 7.18~7.24 (3H, m), 7.39 (2H, t, J=7.8Hz), 7.82 (2H, d, J=8.8Hz).

(2) 0.78 g (2.61 mmol) of 4-[N-(3-dimethylaminopropyl)phenylamino]benzoic acid shown below was obtained as a faint brown powder from 0.88 g (2.82 mmol) of methyl 4-[N-(3-dimethylaminopropyl)phenyl-amino]benzoate in the same manner as in Production Example 1 (3).

Its spectroscopic data are as follows:

<sup>1</sup>H-NMR (CDCl<sub>3</sub>) δ (ppm): 2.09 (2H, m), 2.71 (2H, t, J=8.2Hz), 3.79 (2H, t, J=7.8Hz), 6.81 (2H, d, J=8.8Hz), 7.13~7.19 (3H, m), 7.36 (2H, t, J=8.0Hz), 7.82 (2H, d, J=9.2Hz), 8.51 (1H, s).

#### Example 1

##### 4-[3-(Benzyloxycarbonylamino)propylamino]-2-chloro-3-nitroquinoline

[0050] 0.19 g (0.768 mmol) of 2,4-dichloro-3-nitroquinoline and 0.16 g (0.768 mmol) of N-(benzyloxycarbonyl)-1,3-propyldiamine was heated at 70°C in 5 ml of triethylamine for one hour with stirring. After triethylamine was distilled off under reduced pressure, the residue was dissolved in methylene chloride, washed with water, and dried (MgSO<sub>4</sub>). The solvent was distilled off under reduced pressure and the residue was purified by silica gel column chromatography (n-hexane:ethyl acetate = 2:1 (v/v)) to obtain 0.27 g (0.651 mmol) of 4-[3-(benzyloxycarbonylamino)propylamino]-2-chloro-3-nitroquinoline shown below as yellow powder.

Its spectroscopic data are as follows:

<sup>1</sup>H-NMR (CDCl<sub>3</sub>) δ (ppm): 1.79 (2H, m), 3.35 (4H, m), 5.02 (1H, br), 5.18 (2H, s), 7.15 (1H, br), 7.37 (5H, m), 7.57 (1H, t, J=8.0Hz), 7.73 (1H, t, J=7.8Hz), 7.90 (1H, d, J=8.4Hz), 8.21 (1H, d, J=8.0Hz).

#### Example 2

##### 3-Amino-4-[3-benzyloxycarbonylamino]propylamino]-2-chloroquinoline

[0051] 0.27 g (0.651 mmol) of 4-[3-(benzyloxycarbonylamino)propylamino]-2-chloro-3-nitroquinoline was dissolved in 10 ml of methanol. One ml of concentrated hydrochloric acid and 0.22 g (0.390 mmol) of iron powder were added thereto and the mixture was stirred at room temperature for 2 hours. The reaction mixture was poured into a saturated

sodium hydrogencarbonate aqueous solution. After the resulting mixed solution was extracted with ethyl acetate, the extract was washed with brine and dried ( $\text{Na}_2\text{SO}_4$ ). The solvent was distilled off under reduced pressure and the residue was purified by silica gel column chromatography (chloroform:methanol = 300:1 (v/v)) to obtain 0.12 g (0.312 mmol) of 3-amino-4-[3-(benzyloxycarbonylamino)propylamino]-2-chloroquinoline shown below as faint yellow powder.

Its spectroscopic data are as follows:

$^1\text{H-NMR}$  ( $\text{CDCl}_3$ )  $\delta$  (ppm) : 1.76 (2H, m), 3.30 (2H, m), 3.42 (2H, q,  $J=6.3\text{Hz}$ ), 4.21 (2H, br), 4.44 (1H, br), 4.92 (1H, br), 5.16 (2H, s), 7.30–7.39 (5H, m), 7.46 (2H, m), 7.89 (2H, m).

#### Example 3

##### 1-[3-(benzyloxycarbonylamino)propyl]-4-chloro-1H-imidazo[4,5-c]quinoline

[0052] 0.52 ml (3.12 mmol) of triethyl ortho-formate was added to 0.12 g (0.312 mmol) of 3-amino-4-[3-(benzyloxycarbonylamino)propylamino]-2-chloroquinoline. The mixture was heated at  $100^\circ\text{C}$  and stirred for 3.5 hours. The reaction mixture was concentrated under reduced pressure to obtain 0.12 g (0.304 mmol) of 1-[3-(benzyloxycarbonylamino)propyl]-4-chloro-1H-imidazo[4,5-c]quinoline as a pale yellow solid.

Its spectroscopic data are as follows:

$^1\text{H-NMR}$  ( $\text{CDCl}_3$ )  $\delta$  (ppm) : 2.24 (2H, m), 3.36 (2H, q,  $J=6.4\text{Hz}$ ), 4.67 (2H, t,  $J=7.0\text{Hz}$ ), 4.95 (1H, br), 5.14 (2H, s), 7.31–7.39 (5H, m), 7.62 (1H, t,  $J=7.8\text{Hz}$ ), 7.71 (1H, t,  $J=7.8\text{Hz}$ ), 8.09 (1H, s), 8.13 (1H, d,  $J=8.4\text{Hz}$ ), 8.21 (1H, d,  $J=8.4\text{Hz}$ ).

#### Example 4

##### 1-(3-Aminopropyl)-4-chloro-1H-imidazo[4,5-c]quinoline · acetate

[0053] 3 ml of 33% hydrogen bromide-acetic acid was added to 0.12 g (0.304 mmol) of 1-[3-(benzyloxycarbonylamino)propyl]-4-chloro-1H-imidazo[4,5-c]quinoline and the mixture was stirred at room temperature for 1.5 hours. After the reaction mixture was concentrated under reduced pressure, a 1N sodium hydroxide, aqueous solution and brine were added to the residue and the solution was extracted five times with chloroform. The organic phase was dried ( $\text{Na}_2\text{SO}_4$ ), the solvent was distilled off under reduced pressure, and the residue was purified by silica gel column chromatography (chloroform:methanol:32% acetic acid = 12:6:1 (v/v)) to obtain 60 mg (0.187 mmol) of 1-(3-aminopropyl)-

4-chloro-1H-imidazo[4,5-c]quinoline · acetate shown below as a pale yellow solid.

Its spectroscopic data are as follows:

$^1\text{H-NMR}$  ( $\text{CD}_3\text{OD}$ )  $\delta$  (ppm) : 1.94 (3H, s), 2.39 (2H, m), 3.12 (2H, t,  $J=7.8\text{Hz}$ ), 4.82 (2H, t,  $J=7.2\text{Hz}$ ), 7.70 (2H, m), 7.97 (1H, d,  $J=8.0\text{Hz}$ ), 8.27 (1H, d,  $J=8.0\text{Hz}$ ), 8.41 (1H, s)

#### Example 5

##### 1-(3-Aminopropyl)-1H-imidazo[4,5-c]quinoline-4-amine

[0054] 60 mg (0.187 mmol) of 1-(3-aminopropyl)-4-chloro-1H-imidazo[4,5-c]quinoline · acetate, 10 ml of methanol and 5 ml of liquid ammonium were stirred in an autoclave overnight at  $150^\circ\text{C}$  under heating. The reaction mixture was concentrated under reduced pressure. The resulting residue was dissolved in a small amount of water and 0.5 ml of a 1N sodium hydroxide aqueous solution was added thereto. The precipitate was collected by filtration and recrystallized from ethanol to obtain 11 mg (0.0455 mmol) of 1-(3-aminopropyl)-1H-imidazo[4,5-c]quinoline-4-amine shown below as pale yellow cotton-like crystals (mp:  $243\text{--}245^\circ\text{C}$  (decomposition)).

Its spectroscopic data are as follows:

IR (KBr)  $\text{cm}^{-1}$  : 3320, 3170, 1650.  $^1\text{H-NMR}$  ( $\text{DMSO-}d_6$ )  $\delta$  (ppm) : 1.93 (2H, m), 2.57 (2H, t,  $J=6.6\text{Hz}$ ), 4.64 (2H, t,  $J=7.0\text{Hz}$ ), 6.55 (2H, s), 7.26 (1H, t,  $J=7.2\text{Hz}$ ), 7.44 (1H, t,  $J=7.4\text{Hz}$ ), 7.62 (1H, d,  $J=8.0\text{Hz}$ ), 8.12 (1H, d,  $J=8.0\text{Hz}$ ), 8.19 (1H, s).

#### Example 6

##### 4-[3-(tert-Butoxycarbonylamino)propylamino]-2-chloro-3-nitroquinoline

[0055] 0.59 g (2.41 mmol) of 2,4-Dichloro-3-nitroquinoline and 0.42 g (2.41 mmol) of N-(tert-butoxycarbonyl)-1,3-propylenediamine were heated at  $70^\circ\text{C}$  in 10 ml of triethylamine and stirred for 1.5 hours. Triethylamine was distilled off under reduced pressure. The resulting residue was dissolved in methylene chloride, washed with water, and dried ( $\text{Na}_2\text{SO}_4$ ). After the solvent was distilled off under reduced pressure, the residue was triturated with methanol and filtered to obtain 0.61 g (1.60 mmol) of 4-[3-(tert-butoxycarbonylamino)propylamino]-2-chloro-3-nitroquinoline shown below as yellow crystals (mp:  $159\text{--}161^\circ\text{C}$ ).

Its spectroscopic data are as follows:

IR (KBr)  $\text{cm}^{-1}$ : 3310, 1680, 1580.

$^1\text{H-NMR}$  ( $\text{CDCl}_3$ )  $\delta$  (ppm): 1.50 (9H, s), 1.77 (2H, m), 3.27 (2H, q,  $J=6.1\text{Hz}$ ), 3.36 (2H, q,  $J=6.0\text{Hz}$ ), 4.82 (1H, br), 7.37 (1H, br), 7.55 (1H, t,  $J=7.8\text{Hz}$ ), 7.72 (1H, t,  $J=7.7\text{Hz}$ ), 7.89 (1H, d,  $J=8.2\text{Hz}$ ), 8.27 (1H, d,  $J=8.4\text{Hz}$ ).

#### Example 7

##### 3-Amino-4-[3-(tert-butoxycarbonylamino)propylamino]-2-chloroquinoline

[0056] 0.27 g (0.70 mmol) of 4-[3-(tert-Butoxycarbonylamino)propylamino]-2-chloro-3-nitroquinoline was dissolved in 7 ml of ethanol. Tin chloride [II] dihydrate (0.55 g, 2.45 mmol) was added thereto and the mixture was refluxed under heating for 1 hour. After cooling, the reaction mixture was poured into 2N aqueous ammonia. The resulting solution was extracted twice with chloroform, thereafter the extract was washed (brine), and dried ( $\text{Na}_2\text{SO}_4$ ). The solvent was distilled off under reduced pressure and the residue was purified by silica gel column chromatography (n-hexane:ethyl acetate = 1:1 (v/v)) to obtain 0.15 g (0.428 mmol) of 3-amino-4-[3-(tert-butoxycarbonylamino)propylamino]-2-chloroquinoline shown below as pale yellow crystals.

Its spectroscopic data are as follows:

$^1\text{H-NMR}$  ( $\text{CDCl}_3$ )  $\delta$  (ppm): 1.49 (9H, s), 1.73 (2H, m), 3.29 (2H, t,  $J=6.2\text{Hz}$ ), 3.35 (2H, q,  $J=6.0\text{Hz}$ ), 4.28 (2H, br), 4.60 (1H, br), 4.75 (1H, br), 7.44 (2H, m), 7.87 (1H, d,  $J=7.6\text{Hz}$ ), 7.94 (1H, d,  $J=7.6\text{Hz}$ ).

#### Example 8

##### 1-[3-(tert-butoxycarbonylamino)propyl]-4-chloro-1H-imidazo[4,5-c]quinoline

[0057] 0.36 ml (2.14 mmol) of triethyl ortho-formate was added to 0.15 g (0.428 mmol) of 3-amino-4-[3-(tert-butoxycarbonylamino)propylamino]-2-chloroquinoline. The mixture was stirred at  $100^\circ\text{C}$  for 2 hours and then at  $80^\circ\text{C}$  for overnight. The reaction mixture was concentrated under reduced pressure and the residue was purified by silica gel column chromatography (chloroform:methanol = 150:1 to 100:1 (v/v)) to obtain 0.14 g (0.388 mmol) of 1-[3-(tert-butoxycarbonylamino)propyl]-4-chloro-1H-imidazo[4,5-c]quinoline shown below as white powder (mp:  $155-156^\circ\text{C}$ ).

Its spectroscopic data are as follows:

IR (KBr)  $\text{cm}^{-1}$  : 3380, 1680, 1520.  $^1\text{H-NMR}$  ( $\text{CDCl}_3$ )  $\delta$  (ppm) : 1.47 (9 H, s), 2.22 (2H, m), 3.30 (2H, q,  $J=6.4\text{Hz}$ ), 4.68 (2H, t,  $J=7.2\text{Hz}$ ), 4.7 (1H, br), 7.66 (1H, t,  $J=7.6\text{Hz}$ ), 7.72 (1H, t,  $J=7.6\text{Hz}$ ), 8.09 (1H, s), 8.16 (1H, d,  $J=8.4\text{Hz}$ ), 8.21 (1H, d,  $J=8.4\text{Hz}$ )

#### Example 9

##### 1-(3-Aminopropyl)-4-chloro-1H-imidazo[4,5-c]quinoline

[0058] 50 mg (0.139 mmol) of 1-[3-(tert-butoxycarbonylamino)-propyl]-4-chloro-1H-imidazo[4,5-c]quinoline was dissolved in 3 ml of methylene chloride. 0.11 ml (1.39 mmol) of trifluoroacetic acid was added thereto and the mixture was stirred at room temperature for one day. The reaction mixture was concentrated under reduced pressure and 1 ml of a 1N sodium hydroxide aqueous solution and brine were added to the residue. The resulting solution was extracted with chloroform five times, thereafter the extract was dried ( $\text{Na}_2\text{SO}_4$ ) and concentrated under reduced pressure. The residue was triturated with diethyl ether (containing a small amount of methylene chloride) and the precipitate thus formed was collected by filtration to obtain 14 mg (0.0536 mmol) of 1-(3-aminopropyl)-4-chloro-1H-imidazo[4,5-c]quinoline shown below as white powder.

Its spectroscopic data are as follows:

IR (KBr)  $\text{cm}^{-1}$  : 3400, 1590, 1510.

$^1\text{H-NMR}$  ( $\text{CDCl}_3+\text{CD}_3\text{OD}$ )  $\delta$  (ppm) : 2.06 (2H, m), 2.72 (2H, t,  $J=6.8\text{Hz}$ ), 2.98 (2H, br), 4.64 (2H, t,  $J=7.0\text{Hz}$ ), 7.57 (1H, t,  $J=7.6\text{Hz}$ ), 7.61 (1H, t,  $J=7.6\text{Hz}$ ), 8.03 (1H, s), 8.05 (1H, d,  $J=8.0\text{Hz}$ ), 8.11 (1H, d,  $J=8.0\text{Hz}$ ).

#### Example 10

##### 1-(3-Aminopropyl)-1H-imidazo[4,5-c]quinoline-4-amine

[0059] 14mg (0.0536 mmol) of 1-(3-aminopropyl)-4-chloro-1H-imidazo[4,5-c]quinoline, 5 ml of methanol and 3 ml of liquid ammonia were stirred in an autoclave overnight at  $150^\circ\text{C}$  under heating. The reaction mixture was concentrated under reduced pressure and 0.3 ml of a 1N sodium hydroxide solution was added to the residue. The precipitate thus formed was collected by filtration to obtain 8 mg (0.0331 mmol) of 1-(3-aminopropyl)-1H-imidazo[4,5-c]quinoline-4-amine shown below.

The physicochemical data of this compound was in agreement with the compound of Example 5.

#### Example 11

##### 4-Benzylamino-1-[3-(tert-butoxycarbonylamino)propyl]-1H-imidazo[4,5-c]quinoline

[0060] One ml of benzylamine was added to 30 mg (0.0831 mmol) of 1-[3-(tert-butoxycarbonylamino)propyl]-4-chloro-1H-imidazo[4,5-c]quinoline and the mixture was stirred at 150°C for 3 hours. Excess benzylamine was distilled off under reduced pressure and 1N hydrochloric acid and brine were added thereto. The mixture was extracted twice with methylene chloride. The organic phase was washed with a saturated sodium hydrogencarbonate aqueous solution and dried (Na<sub>2</sub>SO<sub>4</sub>). The solvent was distilled off under reduced pressure and the residue was purified by silica gel column chromatography (chloroform:methanol = 150:1 (v/v)) to obtain 35 mg (0.0811 mmol) of 4-benzylamino-1-[3-(tert-butoxycarbonylamino)propyl]-1H-imidazo[4,5-c]quinoline shown below as white powder (mp: 171-172.5°C).

Its spectroscopic data are as follows:

IR (KBr) cm<sup>-1</sup>: 3330, 1700, 1590, 1540.

<sup>1</sup>H-NMR (CDCl<sub>3</sub>) δ (ppm): 1.46 (9H, s), 2.18 (2H, m), 3.25 (2H, m), 4.57 (2H, t, J=7.0Hz), 4.64 (1H, br), 4.95 (2H, d, J=5.2Hz), 6.05 (1H, br), 7.26~7.36 (4H, m), 7.47 (2H, d, J=7.6Hz), 7.51 (1H, t, J=7.6Hz), 7.82 (1H, s), 7.92 (2H, t, J=8.0Hz).

#### Example 12

##### 1-(3-Aminopropyl)-1H-imidazo[4,5-c]quinoline-4-amine

[0061] 30 mg (0.0695 mmol) of 4-benzylamino-1-[3-(tert-butoxycarbonylamino)propyl]-1H-imidazo[4,5-c]quinoline was dissolved in 3 ml of formic acid. 0.1 g of 20 % palladium hydroxide-carbon was added thereto and the mixture was refluxed under heating for one day. The reaction mixture was filtered and the filtrate was evaporated to distill off the solvent under reduced pressure. The resulting residue was purified by silica gel column chromatography (chloroform:methanol:32% acetic acid = 6:3:1 (v/v)) to obtain the acetic acid salt of the object. The thus obtained product was subjected to treatment with alkali to obtain the free base. The precipitate thus formed was collected by filtration to obtain 5 mg (0.0290 mmol) of 1-(3-aminopropyl)-1H-imidazo[4,5-c]quinoline-4-amine shown below as faint brown powder.

The physicochemical data of this compound was in agreement with compound of Example 5.

#### Example 13

##### 4-[4-(tert-Butoxycarbonylamino)butylamino]-2-chloro-3-nitroquinoline

**[0062]** 0.72 g (2.97 mmol) of 2,4-Dichloro-3-nitroquinoline and 0.56 g (2.97 mmol) of N-(tert-butoxycarbonyl)-1,4-diaminobutane were heated in 12 ml of triethylamine at 70°C and stirred for 1.5 hours. After the reaction mixture was concentrated under reduced pressure, the residue was dissolved in methylene chloride, washed with water, and dried (MgSO<sub>4</sub>). The solvent was distilled off under reduced pressure. The residue was triturated with n-hexane-diethyl ether (1:1 (v/v)) and collected by filtration to obtain 0.97 g (2.46 mmol) of 4-[4-(tert-butoxycarbonylamino)butylamino]-2-chloro-3-nitroquinoline shown below as yellow powder (mp: 125-126.5°C).

Its spectroscopic data are as follows:

IR (KBr) cm<sup>-1</sup>: 3340, 3280, 1680, 1540, 1520.

<sup>1</sup>H-NMR (CDCl<sub>3</sub>) δ (ppm): 1.46 (9H, s), 1.63 (2H, m), 1.78 (2H, m), 3.19 (2H, q, J=6.4Hz), 3.47 (2H, q, J=6.1Hz), 4.68 (1H, br), 6.41 (1H, br), 7.52 (1H, t, J=7.7Hz), 7.74 (1H, t, J=7.8Hz), 7.91 (1H, d, J=8.4Hz), 8.11 (1H, d, J=8.4Hz).

#### Example 14

##### 3-Amino-4-[4-(tert-butoxycarbonylamino)butylamino]-2-chloroquinoline

**[0063]** 0.5 g (1.27 mmol) of 4-[4-(tert-Butoxycarbonylamino)butylamino]-2-chloro-3-nitroquinoline was dissolved in 13 ml of ethanol. 1.0 g (4.43 mmol) of tin chloride (II) dihydrate was added thereto and the mixture was refluxed under heating for one hour. The reaction mixture was poured into 2N aqueous ammonia. The resulting solution was extracted twice with chloroform, washed (brine), and dried (Na<sub>2</sub>SO<sub>4</sub>). The solvent was distilled off under reduced pressure and the residue was purified by silica gel column chromatography (n-hexane:ethyl acetate = 2:1 (v/v)) to collect the product. After the solvent was distilled off, the resulting product was triturated with diethyl ether to obtain 0.12 g (0.329 mmol) of 3-amino-4-[4-(tert-butoxycarbonylamino)butylamino]-2-chloroquinoline shown below as orange crystals.

Its spectroscopic data are as follows:

IR (KBr)  $\text{cm}^{-1}$ : 3270, 1680, 1540, 760.

$^1\text{H-NMR}$  ( $\text{CDCl}_3$ )  $\delta$  (ppm): 1.44 (9H, s), 1.64 (4H, m), 3.17 (2H, q,  $J=6.0\text{Hz}$ ), 3.27 (2H, t,  $J=6.6\text{Hz}$ ), 3.89 (1 H, br), 4.15 (2H, br), 4.59 (1H, br), 7.47 (2H, m), 7.77 (1H, d,  $J=7.6\text{Hz}$ ), 7.89 (1H, d,  $J=7.2\text{Hz}$ ).

#### Example 15

##### 1-[4-(tert-butoxycarbonylamino)butyl]-4-chloro-1H-imidazo[4,5-c]quinoline

[0064] 0.32 ml (1.92 mmol) of Triethyl ortho-formate was added to 0.14 g (0.384 mmol) of 3-amino-4-[4-(tert-butoxycarbonylamino)butylamino]-2-chloroquinoline. The mixture was heated at  $100^\circ\text{C}$  and stirred overnight. The reaction mixture was concentrated under reduced pressure and the resulting residue was purified by silica gel column chromatography (chloroform:methanol = 150:1 to 100:1 (v/v)) to obtain 0.12 g (0.321 mmol) of 1-[4-(tert-butoxycarbonylamino)butyl]-4-chloro-1H-imidazo[4,5-c]quinoline as pale orange powder (mp:  $148\text{--}150^\circ\text{C}$ ).

Its spectroscopic data are as follows:

IR (KBr)  $\text{cm}^{-1}$ : 1695, 1510.

$^1\text{H-NMR}$  ( $\text{CDCl}_3$ )  $\delta$  (ppm): 1.42 (9H, s), 1.62 (2H, m), 2.06 (2H, m), 3.21 (2H, q,  $J=6.4\text{Hz}$ ), 4.58 (1H, br), 4.65 (2H, t,  $J=7.4\text{Hz}$ ), 7.66 (1H, t,  $J=7.2\text{Hz}$ ), 7.72 (1H, t,  $J=7.6\text{Hz}$ ), 8.02 (1H, s), 8.13 (1H, d,  $J=8.4\text{Hz}$ ), 8.21 (1H, d,  $J=8.2\text{Hz}$ ).

#### Example 16

##### 1-(4-Aminobutyl)-4-chloro-1H-imidazo[4,5-c]quinoline

[0065] 0.10 g (0.267 mmol) of 1-[4-(tert-butoxycarbonylamino)butyl]-4-chloro-1H-imidazo[4,5-c]quinoline was dissolved in 6 ml of methylene chloride. 0.21 ml (2.67 mmol) of trifluoroacetic acid was added thereto and the mixture was stirred overnight at room temperature. The reaction mixture was concentrated under reduced pressure. 2 ml of a 1N sodium hydroxide aqueous solution and brine were added to the residue and the mixture was extracted five times with chloroform. The extract was dried ( $\text{Na}_2\text{SO}_4$ ) and concentrated under reduced pressure. The residue was triturated with diethyl ether (containing a small amount of ethylene chloride) and the precipitate thus formed was collected by filtration to obtain 45 mg (0.164 mmol) of 1-(4-aminobutyl)-4-chloro-1H-imidazo[4,5-c]quinoline as pale orange powder.

Its spectroscopic data are as follows:

IR (KBr)  $\text{cm}^{-1}$  : 3400, 2950, 1670, 1520, 1360.

$^1\text{H-NMR}$  ( $\text{CDCl}_3$ )  $\delta$  (ppm) : 1.51 (2H, m), 1.96 (2H, m), 2.66 (2H, t,  $J=7.2\text{Hz}$ ), 3.03 (2H, br), 4.53 (2H, t,  $J=7.4\text{Hz}$ ), 7.56 (1H, t,  $J=7.4\text{Hz}$ ), 7.60 (1H, t,  $J=7.5\text{Hz}$ ), 7.97 (1H, s), 8.02 (1H, d,  $J=6.4\text{Hz}$ ), 8.04 (1H, d,  $J=6.4\text{Hz}$ ).

#### Example 17

##### 1-(4-Aminobutyl)-1H-imidazo[4,5-c]quinoline-4-amine

[0066] 40 mg (0.146 mmol) of 1-(4-aminobutyl)-4-chloro-1H-imidazo[4,5-c]quinoline, 8 ml of methanol and 4 ml of liquid ammonia were stirred overnight in an autoclave under heating at  $150^\circ\text{C}$ . The reaction mixture was concentrated under reduced pressure, the residue was dissolved in a small amount of water and 0.5 ml of a 1N sodium hydroxide aqueous solution was added thereto. The precipitate thus formed was collected by filtration and recrystallized from ethanol to obtain 14 mg (0.0548 mmol) of 1-(4-aminobutyl)-1H-imidazo[4,5-c]quinoline-4-amine as pale yellowish green crystals (mp:  $227 - 230.5^\circ\text{C}$  (decomposition)).

Its spectroscopic data are as follows:

IR (KBr)  $\text{cm}^{-1}$  : 3340, 3180, 1650, 1530, 1400.

$^1\text{H-NMR}$  ( $\text{DMSO-}d_6$ )  $\delta$  (ppm) : 1.30 (2H, br), 1.39 (2H, m), 1.89 (2H, m), 2.55 (2H, t,  $J=6.8\text{Hz}$ ), 4.59 (2H, t,  $J=7.0\text{Hz}$ ), 6.56 (2H, br), 7.26 (1H, t,  $J=7.4\text{Hz}$ ), 7.44 (1H, t,  $J=7.7\text{Hz}$ ), 7.62 (1H, d,  $J=8.0\text{Hz}$ ), 8.05 (1H, d,  $J=8.0\text{Hz}$ ), 8.19 (1H, s).

#### Example 18

##### 4-Benzylamino-1-[4-(tert-butoxycarbonylamino)butyl]-1H-imidazo[4,5-c]quinoline

[0067] 2 ml of benzylamine was added to 70 mg (0.187 mmol) of 1-[4-(tert-butoxycarbonylamino)butyl]-4-chloro-1H-imidazo[4,5-c]quinoline. The resulting mixture was heated at  $150^\circ\text{C}$  and stirred for 3 hours. An excess amount of benzylamine was distilled off under reduced pressure and 1N hydrochloric acid and brine were added thereto. The resulting solution was extracted twice with methylene chloride. The organic phase was washed off under reduced pressure. The residue was purified by silica gel column chromatography (chloroform:methanol = 150:1 (v/v)) to obtain 79 mg (0.177 mmol) of 4-benzylamino-1-[4-(tert-butoxycarbonylamino)butyl]-1H-imidazo[4,5-c]quinoline shown below as white powder (mp:  $151$  to  $153.5^\circ\text{C}$ ).

Its spectroscopic data are as follows:

IR (KBr)  $\text{cm}^{-1}$ : 3380, 3310, 2930, 1680, 1595, 1540, 1245, 1160.

$^1\text{H-NMR}$  ( $\text{CDCl}_3$ )  $\delta$  (ppm): 1.42 (9H, s), 1.58 (2H, m), 2.02 (2H, m), 3.18 (2H, m), 4.55 (2H, t,  $J=7.4\text{Hz}$ ), 4.55 (1H, br), 4.95 (2H, d,  $J=5.6\text{Hz}$ ), 6.03 (1H, t,  $J=5.6\text{Hz}$ ), 7.23–7.36 (4H, m), 7.47 (2H, d,  $J=7.6\text{Hz}$ ), 7.51 (1H, t,  $J=7.8\text{Hz}$ ), 7.75 (1H, s), 7.90 (2H, d,  $J=8.0\text{Hz}$ ).

#### Example 19

##### 1-(4-Aminobutyl)-1H-imidazo[4,5-c]quinoline-4-amine

**[0068]** 67 mg (0.150 mmol) of 4-Benzylamino-1-[4-(tert-butoxycarbonylamino)butyl]-1H-imidazo[4,5-c]quinoline was dissolved in 5 ml of formic acid. 0.15 g of 20% palladium-carbon was added thereto and the mixture was refluxed for 2 days under heating. The reaction mixture was filtered and the solvent was distilled off under reduced pressure. The residue was purified by silica gel column chromatography (chloroform:methanol:32% acetic acid = 6:3:1 (v/v)) to obtain the acetic acid salt of the object. The product was treated with alkali and the solid was collected by filtration to obtain 14 mg (0.0548 mmol) of 1-(4-aminobutyl)-1H-imidazo[4,5-c]quinoline-4-amine shown below as faint brown powder.

The physicochemical properties of this compound was in agreement with those of the compound of Example 17.

#### Example 20

##### 1-(5-Aminopentyl)-1H-imidazo[4,5-c]quinoline-4-amine

**[0069]** 1-(5-Aminopentyl)-1H-imidazo[4,5-c]quinoline-4-amine shown below was synthesized using 2,4-dichloro-3-nitroquinoline and N-(tert-butoxycarbonyl)-1,5-diaminopentane as starting materials in the same manner as in Examples 13 to 17.

Its spectroscopic data are as follows:

IR (KBr)  $\text{cm}^{-1}$  : 3320, 3150, 2950, 1650, 1580, 1520, 1480, 1420, 1400, 1250, 760.

$^1\text{H-NMR}$  ( $\text{DMSO-}d_6$ )  $\delta$  (ppm) : 1.36 (4H, m), 1.86 (2H, m), 2.50 (2H, m), 4.58 (2H, t,  $J=7.2\text{Hz}$ ), 6.55 (2H, s), 7.26 (1H, t,  $J=7.6\text{Hz}$ ), 7.44 (1H, t,  $J=7\text{Hz}$ ), 7.62 (1H, d,  $J=8.4\text{Hz}$ ), 8.02 (1H, d,  $J=8.0\text{Hz}$ ), 8.19 (1H, s).

#### Example 21

##### 1-(6-Aminoheptyl)-1H-imidazo[4,5-c]quinoline-4-amine

[0070] 1-(6-Aminoheptyl)-1H-imidazo[4,5-c]quinoline-4-amine shown below was synthesized using 2,4-dichloro-3-nitroquinoline and N-(tert-butoxycarbonyl)-1,6-diaminohexane as starting materials in the same manner as in Examples 13 to 17.

Its spectroscopic data are as follows:

IR (KBr)  $\text{cm}^{-1}$  : 3330, 3140, 2940, 1650, 1580, 1530, 1480, 1395, 1250, 750.

$^1\text{H-NMR}$  ( $\text{DMSO-}d_6$ )  $\delta$  (ppm) : 1.31 (6H, m), 1.86 (2H, m), 2.50 (2H, m), 4.58 (2H, t,  $J=7.2\text{Hz}$ ), 6.54 (2H, s), 7.26 (1H, t,  $J=7.6\text{Hz}$ ), 7.44 (1H, t,  $J=7.4\text{Hz}$ ), 7.62 (1H, d,  $J=8.4\text{Hz}$ ), 8.03 (1H, d,  $J=8.0\text{Hz}$ ), 8.18 (1H, s).

#### Example 22

##### 3-Amino-4-[4-(tert-butoxycarbonylamino)butylamino]quinoline

[0071] 38.69 mg (97.98  $\mu\text{mol}$ ) of 4-[4-(tert-butoxycarbonylamino)butylamino]-2-chloro-3-nitroquinoline was dissolved in 900 ml of methanol. 10 g of 10% palladium-carbon was added thereto and the mixture was stirred for 2 days under hydrogen atmosphere. The reaction mixture was filtrated and the filtrate was concentrated under reduced pressure. A sodium hydrogencarbonate aqueous solution was added to the residue and the solution was extracted twice with chloroform. The organic phase was washed with brine and dried ( $\text{Na}_2\text{SO}_4$ ). The solvent was distilled off and the residue was purified by silica gel column chromatography (chloroform:methanol = 50:1 to 10:1 (v/v)) to obtain 21.37 mg (64.67  $\mu\text{mol}$ ) of 3-amino-4-[4-(tert-butoxycarbonylamino)butylamino] quinoline shown below as a green brown amorphous substance.

Its spectroscopic data are as follows:

$^1\text{H-NMR}$  ( $\text{CDCl}_3$ )  $\delta$  (ppm) : 1.44 (9H, s), 1.64 (4H, m), 3.16 (2H, m), 3.26 (2H, t,  $J=6.8\text{Hz}$ ), 3.8 (2H, br), 4.6 (1H, br), 7.45 (2H, m), 7.82 (1H, m), 7.97 (1H, m), 8.47 (1H, s).

#### Example 23

##### 4-[4-(tert-butoxycarbonylamino)butylamino]-3-nitroquinoline

[0072] 3.59 g (19.08 mmol) of N-(tert-butoxycarbonyl)-1,4-diaminobutane was dissolved in 70 ml of triethylamine and 3.79 g (18.17 mmol) of 4-chloro-3-nitroquinoline was added thereto. The resulting mixture was heated at  $70^\circ\text{C}$  and stirred for 4 hours. After the reaction mixture was concentrated under reduced pressure, the residue was dissolved in chloroform, washed with water, and dried ( $\text{MgSO}_4$ ). The solvent was distilled off under reduced pressure. The resulting residue was triturated and collected by filtration to obtain 5.77 g (16.01 mmol) of 4-[4-(tert-butoxycarbonylamino)butylamino]-3-nitroquinoline shown below as a yellow solid.

Its spectroscopic data are as follows:

IR ( $\text{KBr}$ )  $\text{cm}^{-1}$  : 3330, 2980, 1710, 1600, 1510, 1260, 1180, 1130, 760, 700.

$^1\text{H-NMR}$  ( $\text{CDCl}_3$ )  $\delta$  (ppm) : 1.44 (9H, s), 1.68 (2H, m), 1.88 (2H, m), 3.21 (2H, q,  $J=6.5\text{Hz}$ ), 3.99 (2H, q,  $J=6.3\text{Hz}$ ), 4.60 (1H, br), 7.49 (1H, t,  $J=7.6\text{Hz}$ ), 7.77 (1H, t,  $J=7.6\text{Hz}$ ), 8.00 (1H, d,  $J=8.4\text{Hz}$ ), 8.30 (1H, d,  $J=8.8\text{Hz}$ ), 9.37 (1H, s), 9.69 (1H, br).

#### Example 24

##### 3-Amino-4-[4-(tert-butoxycarbonylamino)butylamino]quinoline

[0073] 1.80 g (5.0 mmol) of 4-[4-(tert-butoxycarbonylamino) butylamino]-3-nitroquinoline) was dissolved to a mixed solvent of 30 ml of methanol and 10 ml of ethyl acetate. 0.5 g of 10% palladium-carbon was added thereto and the mixture was stirred overnight under hydrogen atmosphere. The reaction mixture was filtered and the filtrate was concentrated under reduced pressure. The residue was purified by silica gel column chromatography (chloroform:methanol = 50:1 to 10:1 (v/v)) to obtain 1.15 g (3.48 mmol) of 3-amino-4-[4-(tert-butoxycarbonylamino)butylamino]quinoline shown below as a brown amorphous substance.

Its physicochemical properties were in agreement with those of the compound of Example 22.

#### Example 25

##### 1-[4-(tert-butoxycarbonylamino)butyl]-1H-imidazo[4,5-c]quinoline

[0074] 21.37 g (64.67 mmol) of 3-amino-4-[4-(tert-butoxycarbonylamino) butylamino]quinoline was heated at 100°C in 43.0 ml (258.7 mmol) of triethyl ortho-formate and stirred for 5 hours. The reaction mixture was concentrated to dryness, triturated with diethyl ether, and collected by filtration to obtain 19.49 g (57.25 mmol) of 1-[4-(tert-butoxycarbonylamino)butyl]-1H-imidazo[4,5-c]quinoline shown below as faint yellowish white powder.

Its spectroscopic data are as follows:

IR (KBr)  $\text{cm}^{-1}$  : 3230, 3040, 2940, 1690, 1560,

1365, 1280, 1170, 880, 760.

$^1\text{H-NMR}$  ( $\text{CDCl}_3$ )  $\delta$  (ppm) : 1.42 (9H, s), 1.62 (4H, m), 2.07 (2H, m), 3.21 (2H, m), 4.57 (1H, br), 4.65 (2H, t,  $J=7.2\text{Hz}$ ), 7.66 (1H, t,  $J=7.5\text{Hz}$ ), 7.72 (1H, t,  $J=7.6\text{Hz}$ ), 7.99 (1H, s), 8.17 (1H, d,  $J=8.2\text{Hz}$ ), 8.30 (1H, d,  $J=8.4\text{Hz}$ ), 9.35 (1H, s).

#### Example 26

##### 1-[4-(tert-Butoxycarbonylamino)butyl]-1H-imidazo[4,5-c]quinoline-5-oxide

[0075] 19.47 g (57.19 mmol) of 1-[4-(tert-Butoxycarbonylamino)butyl]-1H-imidazo[4,5-c]quinoline was dissolved in 500 ml of methylene chloride and 15.51 g (62.91 mmol) of 70% m-chloroperoxybenzoic acid was added thereto. The resulting mixture was stirred overnight at room temperature. A sodium hydrogencarbonate aqueous solution was added to the reaction mixture and the reaction mixture was extracted twice with chloroform. The organic phase was washed with brine and dried ( $\text{Na}_2\text{SO}_4$ ). The solvent was distilled off under reduced pressure and the residue was purified by aluminum column chromatography (chloroform:methanol = 50:1 to 10:1 (v/v)). Finally, the resulting product was triturated with diethyl ether and collected by filtration to obtain 15.88 g (44.55 mmol) of 1-[4-(tert-butoxycarbonylamino)butyl]-1H-imidazo[4,5-c]quinoline-5-oxide shown below as yellowish white powder.

Its spectroscopic data are as follows:

IR (KBr)  $\text{cm}^{-1}$ : 3280, 2970, 1710, 1540, 1365, 1250, 1170, 1140, 850, 760, 630.

$^1\text{H-NMR}$  ( $\text{CDCl}_3$ )  $\delta$  (ppm): 1.42 (9H, s), 1.63 (2H, m), 2.06 (2H, m), 3.22 (2H, m), 4.63 (2H, t,  $J=7.2\text{Hz}$ ), 7.79 (2H, m), 8.00 (1H, s), 8.15 (1H, m), 9.06 (1H, m), 9.08 (1H, s).

#### Example 27

##### 1-[4-(tert-Butoxycarbonylamino)butyl]-1H-imidazo[4,5-c]quinoline-4-amine

[0076] 15.87 g (44.52 mmol) of 1-[4-(tert-butoxycarbonylamino)butyl]-1H-imidazo[4,5-c]quinoline-5-oxide was dissolved in 400 ml of methylene chloride and 200 ml of concentrated aqueous ammonia (29%) was added thereto under ice-cooling. A solution of *p*-toluenesulfonyl chloride (9.34 g, 48.98 mmol) in 50 ml of methylene was further added thereto and the mixture was stirred for 30 minutes, then raising up to room temperature stirred for 2 hours. After the reaction solution was separated, the organic phase was washed with brine and dried ( $\text{Na}_2\text{SO}_4$ ). The solvent was distilled off and the residue was triturated with chloroform, then collected by filtration to obtain 7.10 g (19.97 mmol) of 1-[4-(tert-butoxycarbonylamino)butyl]-1H-imidazo[4,5-c]quinoline-4-amine shown below as a faint yellowish white solid.

Its spectroscopic data are as follows:

IR (KBr)  $\text{cm}^{-1}$ : 3440, 3380, 3110, 2980, 1710, 1650, 1530, 1260, 1160, 760.

$^1\text{H-NMR}$  ( $\text{CDCl}_3$ )  $\delta$  (ppm): 1.43 (9H, s), 1.60 (2H, m), 2.03 (2H, m), 3.19 (2H, m), 4.57 (2H, t,  $J=7.2\text{Hz}$ ), 4.58 (1H, br), 5.46 (2H, br), 7.34 (1H, t,  $J=7.6\text{Hz}$ ), 7.53 (1H, t,  $J=7.7\text{Hz}$ ), 7.82 (1H, s), 7.83 (1H, d,  $J=8.4\text{Hz}$ ), 7.93 (1H, d,  $J=8.2\text{Hz}$ ).

#### Example 28

##### 1-(4-Aminobutyl)-1H-imidazo[4,5-c]quinoline-4-amine

[0077] One hundred ml of trifluoroacetic acid was added to 16.04 g (45.13 mmol) 1-[4-(tert-butoxycarbonylamino)butyl]-1H-imidazo[4,5-c]quinoline-4-amine and the mixture was stirred overnight at room temperature. The reaction mixture was concentrated to dryness. A 2N sodium hydroxide solution aqueous solution (120 ml) was added thereto and the mixture was stirred. The precipitate thus formed was collected by filtration and washed with water and diethyl ether to obtain 9.64 g (37.76 mmol) of 1-(4-aminobutyl)-1H-imidazo[4,5-c]quinoline-4-amine shown below as a pale yellowish white solid.

Its physicochemical properties were in agreement with those of the compound of Example 17.

#### Example 29

##### 3-Amino-4-[4-(tert-butoxycarbonylamino)butylamino]quinoline

[0078] 2.50 g (6.33 mmol) of 4-[4-(tert-Butoxycarbonylamino)butylamino]-2-chloro-3-nitroquinoline was dissolved in 65 ml of methanol and 1 g of 10% palladium-carbon was added thereto. The mixture was stirred for one day under hydrogen atmosphere. The reaction mixture was filtered, the filtrate was concentrated under reduced pressure, and the residue was purified by silica gel column chromatography (chloroform:methanol = 10:1 (v/v)). Finally, the resulting product was triturated with diethyl ether and collected by filtration to obtain 1.75 g (4.77 mmol) of 3-amino-4-[4-(tert-butoxycarbonylamino)butylamino]quinoline hydrochloride shown below as a yellow solid.

Its spectroscopic data are as follows:

IR (KBr)  $\text{cm}^{-1}$  : 3340, 2970, 1690, 1590, 1530, 1170.

$^1\text{H-NMR}$  ( $\text{CDCl}_3$ )  $\delta$  (ppm) : 1.40 (9H, s), 1.68 (2H, m), 1.94 (2H, m), 3.17 (2H, m), 3.91 (2H, m), 5.04 (1H, br), 5.4 (2H, br), 7.10 (1H, br), 7.28 (1H, t,  $J=7.6\text{Hz}$ ), 7.51 (1H, t,  $J=7.6\text{Hz}$ ), 8.03 (2H, t,  $J=8.2\text{Hz}$ ), 8.57 (1H, s).

#### Example 30

##### 1-[4-(tert-Butoxycarbonylamino)butyl]-2-methyl-1H-imiazo[4,5-c]quinoline

[0079] 0.66 g (1.90 mmol) of 3-Amino-4-[4-(tert-butoxycarbonylamino)butylamino]quinoline hydrochloride was heated at  $100^\circ\text{C}$  in 1.47 ml (8.0 mmol) of triethyl ortho-acetate and the mixture was stirred overnight. The reaction mixture was concentrated to dryness and the residue was purified by silica gel column chromatography (chloroform:methanol = 100:1 to 50:1 (v/v)) to obtain 0.55 g (1.55 mmol) of 1-[4-(tert-butoxycarbonylamino)butyl]-2-methyl-1H-imiazo[4,5-c]quinoline shown below as a pale yellow solid.

Its spectroscopic data are as follows:

IR (KBr)  $\text{cm}^{-1}$ : 3240, 2970, 1700, 1550, 1360, 1280, 1170, 760.

$^1\text{H-NMR}$  ( $\text{CDCl}_3$ )  $\delta$  (ppm): 1.42 (9H, s), 1.69 (2H, m), 2.01 (2H, m), 2.72 (3H, s), 3.21 (2H, m), 4.56 (2H, t,  $J=7.8\text{Hz}$ ), 4.57 (1H, br), 6.63 (1H, t,  $J=7.5\text{Hz}$ ), 7.68 (1H, t,  $J=7.6\text{Hz}$ ), 8.13 (1H, d,  $J=8.0\text{Hz}$ ), 8.28 (1H, d,  $J=8.2\text{Hz}$ ), 9.25 (1H, s).

#### Example 31

##### 1-[4-(tert-Butoxycarbonylamino)butyl]-2-methyl-1H-imidazo[4,5-c]quinoline-5-oxide

[0080] 0.15 g (0.423 mmol) of 1-[4-(tert-butoxycarbonylamino)butyl]-2-methyl-1H-imidazo[4,5-c]quinoline was dissolved in a mixed solvent of 5 ml of ethyl acetate and 5 ml of chloroform and 0.11 ml (0.508 mmol) of 32% peracetic acid was added thereto. The mixture was heated at  $50^\circ\text{C}$  and stirred for 3 hours. After the reaction mixture was poured into a sodium hydrogen carbonate aqueous solution, the resulting solution was extracted with chloroform, dried ( $\text{Na}_2\text{SO}_4$ ), then concentrated under reduced pressure. The residue was purified by silica gel column chromatography (chloroform:methanol = 20:1 (v/v)) to obtain 0.13 g (0.351 mmol) of 1-[4-(tert-butoxycarbonylamino)butyl]-2-methyl-1H-imidazo[4,5-c]quinoline-5-oxide shown below as a white solid.

Its spectroscopic data are as follows:

IR (KBr)  $\text{cm}^{-1}$ : 3230, 2980, 1710, 1540, 1440, 1370, 1280, 1170, 880, 770.

$^1\text{H-NMR}$  ( $\text{CDCl}_3$ )  $\delta$  (ppm): 1.42 (9H, s), 1.70 (2H, m), 2.00 (2H, m), 2.70 (3H, s), 3.23 (2H, m), 4.53 (2H, t,  $J=7.8\text{Hz}$ ), 4.63 (1H, br), 7.76 (2H, m), 8.12 (1H, m), 9.01 (1H, s), 9.06 (1H, m).

#### Example 32

##### 1-[4-(tert-Butoxycarbonylamino)butyl]-2-methyl-1H-imidazo[4,5-c]quinoline-4-amine

[0081] 0.124 g (0.335 mmol) of 1-[4-(tert-butoxycarbonylamino)butyl]-2-methyl-1H-imidazo[4,5-c]quinoline-5-oxide was dissolved in 3 ml of methylene chloride. Two ml of concentrated aqueous ammonia (29%) and a solution of 70 mg (0.368 mg) of p-toluenesulfonyl chloride in 1 ml of methylene chloride were added thereto under ice-cooling and the mixture was stirred for 30 minutes, then stirred at room temperature for 3 hours. After brine was added, the reaction mixture was extracted with chloroform and dried ( $\text{Na}_2\text{SO}_4$ ). The solvent was distilled off and the residue was purified by silica gel column chromatography (chloroform:methanol = 30:1 to 20:1 (v/v)) to obtain 0.114 g (0.309 mmol) of 1-[4-(tert-butoxycarbonylamino)butyl]-2-methyl-1H-imidazo[4,5-c]quinoline-4-amine shown below as a pale brown solid.

its spectroscopic data are as follows:

IR (KBr)  $\text{cm}^{-1}$ : 3460, 3370, 3100, 1710, 1640, 1540, 1380, 1260, 1170, 750.

$^1\text{H-NMR}$  ( $\text{CDCl}_3$ )  $\delta$  (ppm): 1.42 (9H, s), 1.06 (2H, m), 1.97 (2H, m), 2.65 (3H, s), 3.20 (2H, m), 4.47 (2H, t,  $J=7.6\text{Hz}$ ), 4.58 (1H, br), 5.39 (2H, br), 7.32 (1H, t,  $J=7.6\text{Hz}$ ), 7.50 (1H, t,  $J=7.7\text{Hz}$ ), 7.82 (1H, d,  $J=8.4\text{Hz}$ ), 7.90 (1H, d,  $J=8.2\text{Hz}$ ).

Example 33

#### 1-(4-Aminobutyl)-2-methyl-1H-imidazo[4,5-c]quinoline-4-amine

[0082] Sixty mg (0.223 mmol) of 1-(4-aminobutyl)-2-methyl-1H-imidazo[4,5-c]quinoline-4-amine shown below was obtained as a faint brown solid using 98 mg (0.265 mmol) of 1-[4-(tert-butoxycarbonylamino)butyl]-2-methyl-1H-imidazo[4,5-c]quinoline-4-amine as a starting material in the same manner as in Example 28.

its spectroscopic data are as follows:

IR (KBr)  $\text{cm}^{-1}$ : 3300, 3080, 1620, 1590, 1540, 1480, 1430, 1380, 1260, 850, 750.

$^1\text{H-NMR}$  ( $\text{DMSO}-d_6$ )  $\delta$  (ppm): 1.48 (2H, m), 1.85 (2H, m), 2.58 (2H, t,  $J=7.0\text{Hz}$ ), 2.60 (3H, s), 4.49 (2H, t,  $J=7.5\text{Hz}$ ), 6.45 (2H, s), 7.25 (1H, t,  $J=7.6\text{Hz}$ ), 7.40 (1H, t,  $J=7.8\text{Hz}$ ), 7.60 (1H, d,  $J=8.0\text{Hz}$ ), 8.04 (1H, d,  $J=8.0\text{Hz}$ ).

Example 34

#### 4-(4-Phthalimidebutylamino)-2-chloro-3-nitroquinoline

[0083]

(1) 5.41 g (28.74 mmol) of N-(tert-butoxycarbonyl)-1,4-diaminobutane was dissolved in 100 ml of 1,4-dioxane and 4.86 g (28.74 mmol) of N-carboethoxyphthalimide was added thereto. The mixture was heated at 45 to 60°C and stirred for 4 hours. After the reaction mixture was concentrated under reduced pressure, 1N hydrochloric acid was added thereto and the resulting solution was extracted with ethyl acetate. The extract was washed with brine and dried ( $\text{Na}_2\text{SO}_4$ ). The solvent was distilled off and the residue was purified by silica gel column chromatography (chloroform:methanol = 200:1 (v/v)) to obtain 5.40 g (16.96 mmol) of N-[4-(tert-butoxycarbonylamino)butyl]phthalimide as a white solid. Its spectroscopic data are as follows:

$^1\text{H-NMR}$  ( $\text{CDCl}_3$ )  $\delta$  (ppm): 1.43 (9H, s), 1.53 (2H, m), 1.71 (2H, m), 3.16 (2H, m), 3.71 (2H, t,  $J=7.0\text{Hz}$ ), 4.55 (1H, br), 7.71 (2H, dd,  $J=5.8\text{Hz}$ , 3.0Hz), 7.84 (2H, dd,  $J=5.4\text{Hz}$ , 3.0Hz).

(2) 5.13 g (16.11 mmol) of N-[4-(tert-butoxycarbonylamino)butyl]phthalimide was dissolved in 100 ml of methylene chloride and 6.21 ml (80.56 mmol) of trifluoroacetic acid was added thereto. The mixture was stirred overnight at room temperature. The reaction mixture was concentrated to dryness, then dried by heating in vacuum at 50°C to obtain 5.35 g (16.10 mmol) of N-(4-aminobutyl)phthalimide trifluoroacetate as a pale brown solid.

Its spectroscopic data are as follows:

<sup>1</sup>H-NMR (CDCl<sub>3</sub>) δ (ppm) : 1.78 (4H, m), 3.13 (2H, m), 3.72 (2H, t, J=6.2Hz), 7.72 (2H, dd, J=5.7Hz, 3.1Hz), 7.81 (2H, dd, J=5.4Hz, 3.0Hz).

(3) 5.26 g (15.83 mmol) of N-(4-aminobutyl)phthalimide trifluoroacetate and 3.85 g (15.83 mmol) of 2,4-dichloro-3-nitroquinoline were heated in 70 ml of triethylamine at 70°C and stirred for 1.5 hours. After the reaction mixture was concentrated under reduced pressure, water was added thereto and the resulting solution was extracted with methylene chloride. The extract was dried (Na<sub>2</sub>SO<sub>4</sub>) and the solvent was distilled off. The residue was purified by silica gel column chromatography (chloroform:methanol = 150:1 (v/v)). Finally, the purified product was triturated with diethyl ether and collected by filtration to obtain 3.83 g (9.01 mmol) of 4-(4-phthalimidebutylamino)-2-chloro-3-nitroquinoline shown below as a yellow solid.

Its spectroscopic data are as follows:

IR (KBr) cm<sup>-1</sup> : 3410, 1770, 1710, 1580, 1530, 1440, 1400, 1380, 1050, 760, 720.

<sup>1</sup>H-NMR (CDCl<sub>3</sub>) δ (ppm) : 1.82 (4H, m), 3.50 (2H, m), 3.77 (2H, t, J=6.6Hz), 6.0 (1H, br), 7.55 (1H, t, J=7.7Hz), 7.73 (2H, dd, J=5.4Hz, 3.0Hz), 7.74 (1H, t, J=7.7Hz), 7.85 (2H, dd, J=5.3Hz, 3.1Hz), 7.91 (1H, d, J=8.4Hz), 7.98 (1H, d, J=8.4Hz).

#### Example 35

##### 3-Amino-4-(4-phthalimidebutylamino)quinoline hydrochloride

[0084] 2.0 g (4.71 mmol) of 4-(4-Phthalimidebutylamino)-2-chloro-3-nitroquinoline was dissolved in a mixed solvent of 90 ml of methanol and 60 ml of methylene chloride. One g of 10% Palladium-carbon was added thereto and the mixture was stirred overnight under hydrogen atmosphere. The reaction mixture was filtered and the filtrate was concentrated under reduced pressure. The residue was triturated with diethyl ether and collected by filtration to obtain 1.33 g (3.35 mmol) of 3-amino-4-(4-phthalimidebutylamino)quinoline hydrochloride shown below as a yellow solid.

Its spectroscopic data are as follows:

IR (KBr) cm<sup>-1</sup> : 3370, 3190, 2670, 1765, 1700, 1580, 1520, 1410, 1380, 1330, 725.

<sup>1</sup>H-NMR (DMSO-d<sub>6</sub>) δ (ppm) : 1.70 (2H, m), 2.08 (2H, m), 3.60 (2H, m), 3.88 (2H, m), 5.27 (2H, br), 7.41 (1H, br), 7.51 (1H, t, J=7.7Hz), 7.70 (1H, t, J=7.8Hz), 7.81 (1H, d, J=8.4Hz), 7.84 (4H, s), 8.18 (1H, s), 8.35 (1H, d, J=8.8Hz).

#### Example 36

##### 2-Ethoxymethyl-1-(4-phthalimidebutyl)-1H-imidazo[4,5-c]quinoline

[0085] 1.21 ml (12.82 mmol) of ethoxyacetic acid was added to 0.66 g (1.66 mmol) of 3-Amino-4-(4-phthalimidebutylamino)quinoline hydrochloride. The reaction mixture was heated at 120°C and stirred for 7 hours. After cooling, 1N sodium hydroxide aqueous solution was added thereto and the resulting solution was extracted twice with chloroform.

The extract was washed with brine and dried ( $\text{Na}_2\text{SO}_4$ ). The solvent was distilled off under reduced pressure and the residue was purified by silica gel column chromatography (chloroform:methanol = 150:1 (v/v)) to obtain 0.59 g (1.38 mmol) of 2-ethoxymethyl-1-(4-phthalimidebutyl)-1H-imidazo[4,5-c]quinoline as a pale yellowish white solid.

Its spectroscopic data are as follows:

IR (KBr)  $\text{cm}^{-1}$ : 3460, 2980, 2940, 1770, 1700, 1400, 1360, 1330, 1100, 1040, 760, 730.

$^1\text{H-NMR}$  ( $\text{CDCl}_3$ )  $\delta$  (ppm): 1.18 (3H, t,  $J=7.0\text{Hz}$ ), 1.96 (2H, m), 2.08 (2H, m), 3.59 (2H, q,  $J=6.9\text{Hz}$ ), 3.79 (2H, t,  $J=6.8\text{Hz}$ ), 4.69 (2H, t,  $J=7.9\text{Hz}$ ), 4.88 (2H, s), 7.60 (1H, t,  $J=7.5\text{Hz}$ ), 7.66 (1H, t,  $J=7.8\text{Hz}$ ), 7.72 (2H, dd,  $J=5.6\text{Hz}$ , 3.2Hz), 7.83 (2H, dd,  $J=5.4\text{Hz}$ , 3.4Hz), 8.11 (1H, d,  $J=8.0\text{Hz}$ ), 8.26 (1H, d,  $J=8.2\text{Hz}$ ), 9.28 (1H, s).

#### Example 37

##### 2-Ethoxymethyl-1-(4-phthalimidebutyl)-1H-imidazo[4,5-c]quinoline-5-oxide

[0086] 0.57 g (1.33 mmol) of 2-Ethoxymethyl-1-(4-phthalimidebutyl)-1H-imidazo[4,5-c]quinoline was dissolved in 25 ml of methylene chloride and 0.36 g (1.46 mmol) of 70% m-chloroperoxybenzoic acid was added thereto. The mixture was stirred overnight at room temperature. The reaction mixture was poured into a sodium hydrogencarbonate aqueous solution and extracted with chloroform. The extract was washed with water, dried ( $\text{Na}_2\text{SO}_4$ ). The solvent was distilled off and the residue was purified by silica gel column chromatography (chloroform:methanol = 70:1 to 30:1 (v/v)). Finally, the purified product was triturated with diethyl ether and collected by filtration to obtain 0.52 g (1.17 mmol) of 2-ethoxymethyl-1-(4-phthalimidebutyl)-1H-imidazo[4,5-c]quinoline-5-oxide shown below as a light brown solid.

Its spectroscopic data are as follows:

IR (KBr)  $\text{cm}^{-1}$ : 3420, 2980, 1770, 1710, 1400, 1360, 1160, 1150, 1090, 890, 720.

$^1\text{H-NMR}$  ( $\text{CDCl}_3$ )  $\delta$  (ppm): 1.19 (3H, t,  $J=7.0\text{Hz}$ ), 1.96 (2H, m), 2.06 (2H, m), 3.60 (2H, q,  $J=7.1\text{Hz}$ ), 3.79 (2H, t,  $J=6.8\text{Hz}$ ), 4.66 (2H, t,  $J=7.8\text{Hz}$ ), 4.84 (2H, s), 7.73 (2H, dd,  $J=5.4\text{Hz}$ , 3.0Hz), 7.74 (2H, m), 7.82 (2H, dd,  $J=5.6\text{Hz}$ , 3.2Hz), 8.10 (1H, m), 9.02 (1H, s), 9.04 (1H, m).

#### Example 38

##### 2-Ethoxymethyl-1-(4-phthalimidebutyl)-1H-imidazo[4,5-c]quinoline-4-amine

[0087] 0.45 g (1.01 mmol) of 2-Ethoxymethyl-1-(4-phthalimidebutyl)-1H-imidazo[4,5-c]quinoline-4-amine shown below was obtained as a pale yellowish white solid using 0.50 g (1.12 mol) of 2-ethoxymethyl-1-(4-phthalimidebutyl)-1H-imidazo[4,5-c]quinoline-5-oxide as a starting material in the same manner as in Example 27.

Its spectroscopic data are as follows:

IR (KBr)  $\text{cm}^{-1}$ : 3340, 3170, 1770, 1710, 1620, 1540, 1400, 1080, 760, 720.

$^1\text{H-NMR}$  ( $\text{CDCl}_3$ )  $\delta$  (ppm): 1.18 (3H, t,  $J=6.8\text{Hz}$ ), 1.93 (2H, m), 2.05 (2H, m), 3.58 (2H, q,  $J=6.9\text{Hz}$ ), 3.78 (2H, t,  $J=6.8\text{Hz}$ ), 4.61 (2H, t,  $J=7.8\text{Hz}$ ), 4.80 (2H, s), 5.45 (2H, br), 7.28 (1H, t,  $J=7.4\text{Hz}$ ), 7.48 (1H, t,  $J=7.6\text{Hz}$ ), 7.72 (2H, dd,  $J=5.4\text{Hz}$ ,  $3.0\text{Hz}$ ), 7.79 (1H, d,  $J=8.6\text{Hz}$ ), 7.83 (2H, dd,  $J=5.2\text{Hz}$ ,  $3.2\text{Hz}$ ), 7.88 (1H, d,  $J=8.6\text{Hz}$ ).

#### Example 39

#### 1-(4-Aminobutyl)-2-ethoxymethyl-1H-imidazo[4,5-c]quinoline-4-

[0088] 0.44 g (0.992 mmol) of 2-Ethoxymethyl-1-(4-phthalimidebutyl)-1H-imidazo[4,5-c]quinoline-4-amine was dissolved in 20 ml of ethanol and 0.30 ml (4.96 mmol) of 80% hydrazine hydrate was added thereto. The mixture was refluxed under heating for 4 hours. After the reaction mixture was concentrated to dryness, 4 ml of 0.5 N sodium hydroxide aqueous solution was added to the residue and the solution was stirred. The precipitate thus formed was collected by filtration, washed with water and diethyl ether, and dried in vacuum to obtain 0.27 g (0.861 mmol) of 1-(4-Aminobutyl)-2-ethoxymethyl-1H-imidazo[4,5-c]quinoline-4-amine as a yellowish white solid.

Its spectroscopic data are as follows:

IR (KBr)  $\text{cm}^{-1}$ : 3310, 3130, 1640, 1590, 1530, 1480, 1440, 1390, 1090, 750.

$^1\text{H-NMR}$  ( $\text{CDCl}_3$ )  $\delta$  (ppm): 1.25 (3H, t,  $J=7.2\text{Hz}$ ), 1.66 (2H, m), 2.04 (2H, m), 2.80 (2H, t,  $J=7.2\text{Hz}$ ), 3.61 (2H, q,  $J=6.9\text{Hz}$ ), 4.60 (2H, t,  $J=8.2\text{Hz}$ ), 4.81 (2H, s), 5.43 (2H, br), 7.34 (1H, t,  $J=7.6\text{Hz}$ ), 7.53 (1H, t,  $J=7.7\text{Hz}$ ), 7.63 (1H, d,  $J=8.4\text{Hz}$ ), 7.97 (1H, d,  $J=8.0\text{Hz}$ ).

#### Example 40

#### 1-(4-[( $\alpha$ -(2-Dimethylaminoethoxy)- $\alpha$ -phenyl-p-toluyloxy]amino)butyl)-1H-imidazo[4,5-c]quinoline-4-amine

[0089] 0.44 g (1.47 mmol) of  $\alpha$ -(2-Dimethylaminoethoxy)- $\alpha$ -phenyl-p-toluic acid was suspended in 10 ml of chloroform. 0.21 ml (2.94 mmol) of thionyl chloride was added thereto, and the mixture was refluxed under heating for 2.5 hour. The reaction solution was concentrated under reduced pressure to obtain a crude product of acid chloride.

[0090] 0.38 g (1.47 mmol) of 1-(4-Aminobutyl)-1H-imidazo[4,5-c]quinoline-4-amine was dissolved in a mixed solvent of 22 ml of ethanol and 15 ml of water and 1.47 ml of a 1N sodium hydroxide aqueous solution was added thereto. Under ice-cooling, 5 ml of a suspension of the acid chloride product as obtained above in chloroform was added thereto and the mixture was stirred for 20 minutes. The reaction mixture was poured into a sodium hydrogencarbonate aqueous solution and extracted with chloroform and then a chloroform-methanol (10:1 (v/v)) mixed solution. The organic phase was dried ( $\text{Na}_2\text{SO}_4$ ), the solvent was distilled off, and the residue was purified by aluminum column chromatography (chloroform:methanol = 200:1 to 30:1 (v/v)). Finally, the purified product was triturated with ether and collected by filtration to obtain 0.44 g (0.820 mmol) of 1-(4-[( $\alpha$ -(2-dimethylaminoethoxy)- $\alpha$ -phenyl-p-toluyloxy]amino)butyl)-1H-imidazo[4,5-

c]quinoline-4-amine as faint orange white powder (mp: 110 to 114°C).

Its spectroscopic data are as follows:

IR (KBr)  $\text{cm}^{-1}$ : 3330, 2950, 1640, 1530, 1480, 1400, 1310, 1250, 1100, 750, 700.

$^1\text{H-NMR}$  ( $\text{CDCl}_3$ )  $\delta$  (ppm): 1.70 (2H, m), 2.07 (2H, m), 2.27 (6H, s), 2.60 (2H, t,  $J=6.0\text{Hz}$ ), 3.50 (2H, q,  $J=6.6\text{Hz}$ ), 3.56 (2H, td,  $J=6.0\text{Hz}$ , 2.4Hz), 4.60 (2H, t,  $J=7.2\text{Hz}$ ), 5.39 (1H, s), 5.46 (2H, br), 6.11 (1H, m), 7.23–7.33 (6H, m), 7.40 (2H, d,  $J=8.4\text{Hz}$ ), 7.48 (1H, t,  $J=7.7\text{Hz}$ ), 7.63 (2H, d,  $J=8.4\text{Hz}$ ), 7.81 (1H, d,  $J=8.4\text{Hz}$ ), 7.83 (1H, s), 7.92 (1H, d,  $J=8.0\text{Hz}$ ).

#### Example 41

##### 1-[4-(3-(4-((2-Dimethylaminoethoxy)benzyl)phenyl)propanoylamino)butyl]-1H-imidazo[4,5-c]quinoline-4-amine

[0091] 34 mg (0.0602 mmol) of 1-[4-(3-(4-((2-dimethylaminoethoxy)benzyl)phenyl)-propanoylamino)butyl]-1H-imidazo[4,5-c]quinoline-4-amine shown below was obtained as faint yellowish white powder using 75 mg (0.229 mmol) of 3-[4-((2-dimethylaminoethoxy)benzyl)phenyl]propionic acid as a starting material in the same manner as in Example 22.

Its spectroscopic data are as follows:

IR (KBr)  $\text{cm}^{-1}$ : 3330, 2930, 1650, 1530, 1480, 1400, 1250, 1100, 750, 700.

$^1\text{H-NMR}$  ( $\text{CDCl}_3$ )  $\delta$  (ppm): 1.47 (2H, m), 1.99 (2H, m), 2.24 (6H, s), 2.39 (2H, t,  $J=7.6\text{Hz}$ ), 2.56 (2H, t,  $J=5.8\text{Hz}$ ), 2.89 (2H, t,  $J=7.6\text{Hz}$ ), 3.23 (2H, d,  $J=6.7\text{Hz}$ ), 3.52 (2H, t,  $J=5.8\text{Hz}$ ), 4.49 (2H, t,  $J=7.0\text{Hz}$ ), 5.29 (1H, s), 5.33 (1H, m), 5.48 (2H, br), 7.10 (2H, d,  $J=8.0\text{Hz}$ ), 7.16–7.36 (8H, m), 7.53 (1H, t,  $J=7.8\text{Hz}$ ), 7.79 (1H, s), 7.83 (1H, d,  $J=8.4\text{Hz}$ ), 7.90 (1H, d,  $J=8.0\text{Hz}$ ).

#### Example 42

##### 1-[4-((2-Dimethylaminoethoxy)- $\alpha$ -phenyl-m-toluy]amino)butyl]-1H-imidazo[4,5-c]quinoline-4-amine

[0092] 0.18 g (0.335 mmol) of 1-[4-((2-dimethylaminoethoxy)- $\alpha$ -phenyl-m-toluy]amino)butyl]-1H-imidazo[4,5-c]quinoline-4-amine shown below was obtained as faint yellowish white powder using 0.20 g (0.668 mmol) of  $\alpha$ -(2-dimethylaminoethoxy)- $\alpha$ -phenyl-m-toluic acid as a starting material in the same manner as in Example 22.

its spectroscopic data are as follows:

IR (KBr)  $\text{cm}^{-1}$ : 3320, 2950, 1630, 1580, 1530, 1480, 1390, 1250, 1100, 750, 700.

$^1\text{H-NMR}$  ( $\text{CDCl}_3$ )  $\delta$  (ppm): 1.73 (2H, m), 2.09 (2H, m), 2.24 (6H, s), 2.58 (2H, m), 3.51 (2H, q,  $J=6.6\text{Hz}$ ), 3.54 (2H, t,  $J=5.4\text{Hz}$ ), 4.60 (2H, t,  $J=7.2\text{Hz}$ ), 5.38 (1H, s), 5.45 (2H, br), 6.72 (1H, m), 7.22–7.41 (8H, m), 7.51 (1H, t,  $J=7.7\text{Hz}$ ), 7.66 (1H, d,  $J=7.6\text{Hz}$ ), 7.82 (1H, d,  $J=8.2\text{Hz}$ ), 7.85 (1H, s), 7.88 (1H, s), 7.94 (1H, d,  $J=8.0\text{Hz}$ ).

#### Example 43

##### 1-(4-[[α-(3-Dimethylaminopropoxy)-α-phenyl-p-tolucyl]amino]butyl)-1H-imidazo[4,5-c]quinoline-4-amine

[0093] 22 mg (0.0399 mmol) of 1-(4-[[α-(3-Dimethylaminopropoxy)-α-phenyl-p-tolucyl]amino]butyl)-1H-imidazo[4,5-c]quinoline-4-amine shown below was obtained as white powder using 36 mg (0.115 mmol) of α-(3-Dimethylaminopropoxy)-α-phenyl-p-toluic acid as a starting material in the same manner as in Example 22.

its spectroscopic data are as follows:

IR (KBr)  $\text{cm}^{-1}$ : 3430, 3300, 2950, 1640, 1530, 1480, 1390, 1100, 750, 700.

$^1\text{H-NMR}$  ( $\text{CDCl}_3$ )  $\delta$  (ppm): 1.70 (2H, m), 1.82 (2H, m), 2.08 (2H, m), 2.38 (2H, t,  $J=7.6\text{Hz}$ ), 3.50 (4H, m), 4.60 (2H, t,  $J=7.2\text{Hz}$ ), 5.36 (1H, s), 5.46 (2H, br), 6.11 (1H, m), 7.23–7.35 (6H, m), 7.39 (2H, d,  $J=8.4\text{Hz}$ ), 7.48 (1H, t,  $J=7.7\text{Hz}$ ), 7.64 (2H, d,  $J=8.4\text{Hz}$ ), 7.81 (1H, d,  $J=8.4\text{Hz}$ ), 7.83 (1H, s), 7.92 (1H, d,  $J=8.2\text{Hz}$ ).

#### Example 44

##### 1-(4-[[α-(2-Dimethylaminoethoxy)-α-phenyl-p-tolucyl]amino]butyl)-1H-imidazo[4,5-c]quinoline-4-amine

[0094] 0.24 g (0.425 mmol) of 1-(4-[[α-(2-Dimethylaminoethoxy)-α-phenyl-p-tolucyl]amino]butyl)-1H-imidazo[4,5-c]quinoline-4-amine shown below was obtained as faint yellowish white powder using 0.18 g (0.550 mmol) of α-(2-Dimethylaminoethoxy)-α-phenyl-p-toluic acid in the same manner as in Example 22.

Its spectroscopic data are as follows:

IR (KBr)  $\text{cm}^{-1}$ : 3320, 2980, 1640, 1530, 1400, 1310, 1250, 1100, 1070, 750, 700.

$^1\text{H-NMR}$  ( $\text{CDCl}_3$ )  $\delta$  (ppm): 1.01 (6H, t,  $J=7.0\text{Hz}$ ), 1.70 (2H, m), 2.07 (2H, m), 2.56 (4H, q,  $J=7.2\text{Hz}$ ), 2.75 (2H, t,  $J=6.4\text{Hz}$ ), 3.50 (2H, q,  $J=6.5\text{Hz}$ ), 3.54 (2H, t,  $J=6.3\text{Hz}$ ), 4.60 (2H, t,  $J=7.2\text{Hz}$ ), 5.40 (1H, s), 5.47 (2H, br), 6.12 (1H, m), 7.22–7.33 (6H, m), 7.40 (2H, d,  $J=8.0\text{Hz}$ ), 7.48 (1H, t,  $J=7.6\text{Hz}$ ), 7.63 (2H, d,  $J=8.4\text{Hz}$ ), 7.82 (1H, d,  $J=8.4\text{Hz}$ ), 7.83 (1H, s), 7.92 (1H, d,  $J=8.0\text{Hz}$ ).

#### Example 45

##### 1-(6-[(α-(2-Dimethylaminoethoxy)-α-phenyl-p-toluoyl)amino]hexyl)-1H-imidazo[4,5-c]quinoline-4-amine

[0095] 0.12 g, (0.212 mmol) of 1-(6-[(α-(2-dimethylaminoethoxy)-α-phenyl-p-toluoyl)amino]hexyl)-1H-imidazo[4,5-c]quinoline-4-amine shown below was obtained as faint yellowish white powder using as starting materials 0.16 g (0.534 mmol) of α-(2-dimethylaminoethoxy)-α-phenyl-p-toluic acid and 0.14 g (0.494 mmol) of 1-(6-aminoethyl)-1H-imidazo[4,5-c]quinoline-4-amine in the same manner as in Example 22.

Its spectroscopic data are as follows:

IR (KBr)  $\text{cm}^{-1}$ : 3330, 3200, 2940, 1640, 1530, 1400, 1310, 1100, 750, 700.

$^1\text{H-NMR}$  ( $\text{CDCl}_3$ )  $\delta$  (ppm): 1.45 (4H, m), 1.60 (2H, m), 2.01 (2H, m), 2.26 (6H, s), 2.59 (2H, t,  $J=6.0\text{Hz}$ ), 3.43 (2H, q,  $J=6.9\text{Hz}$ ), 3.56 (2H, td,  $J=6.0\text{Hz}$ , 2.0Hz), 4.52 (2H, t,  $J=7.2\text{Hz}$ ), 5.39 (1H, s), 5.46 (2H, br), 6.04 (1H, m), 7.22–7.32 (5H, m), 7.33 (1H, t,  $J=7.6\text{Hz}$ ), 7.41 (2H, d,  $J=8.0\text{Hz}$ ), 7.52 (1H, t,  $J=7.6\text{Hz}$ ), 7.68 (2H, d,  $J=8.8\text{Hz}$ ), 7.80 (1H, s), 7.83 (1H, d,  $J=8.4\text{Hz}$ ), 7.94 (1H, d,  $J=8.4\text{Hz}$ ).

#### Example 46

##### 1-(4-[(α-(2-Dimethylaminoethoxy)-p-toluoyl)amino]butyl)-1H-imidazo[4,5-c]quinoline-4-amine

[0096] 0.14 g (0.304 mmol) of 1-(4-[(α-(2-dimethylaminoethoxy)-p-toluoyl)amino]butyl)-1H-imidazo[4,5-c]quinoline-4-amine shown below was obtained as pale yellowish white powder using 0.13 g (0.582 mmol) of α-(2-dimethylaminoethoxy)-p-toluic acid as a starting material in the same manner as in Example 22.

Its spectroscopic data are as follows:

IR (KBr)  $\text{cm}^{-1}$  : 3360, 3300, 3180, 2940, 1640, 1530, 1470, 1400, 1300, 1100, 750.

$^1\text{H-NMR}$  ( $\text{CDCl}_3$ )  $\delta$  (ppm) : 1.72 (2H, m), 2.09 (2H, m), 2.27 (6H, s), 2.55 (2H, t,  $J=5.8\text{Hz}$ ), 3.51 (2H, q,  $J=6.7\text{Hz}$ ), 3.56 (2H, t,  $J=5.8\text{Hz}$ ), 4.57 (2H, s), 4.61 (2H, t,  $J=7.0\text{Hz}$ ), 5.46 (2H, br), 6.16 (1H, m), 7.30 (1H, t,  $J=7.7\text{Hz}$ ), 7.39 (2H, d,  $J=8.2\text{Hz}$ ), 7.52 (1H, t,  $J=7.8\text{Hz}$ ), 7.67 (2H, d,  $J=8.4\text{Hz}$ ), 7.83 (1H, d,  $J=8.4\text{Hz}$ ), 7.85 (1H, s), 7.94 (1H, d,  $J=8.4\text{Hz}$ ).

#### Example 47

##### 1-[4-[4-(2-Dimethylaminoethoxy)benzoylamino]butyl]-1H-imidazo[4,5-c]quinoline-4-amine

[0097] 0.14 g (0.314 mmol) of 1-[4-[4-(2-dimethylaminoethoxy)benzoylamino]butyl]-1H-imidazo[4,5-c]quinoline-4-amine shown below was obtained as pale yellowish white powder using as a starting material 0.13 g (0.621 mmol) of 4-(2-dimethylaminoethoxy)benzoic acid in the same manner as in Example 22.

Its spectroscopic data are as follows:

IR (KBr)  $\text{cm}^{-1}$  : 3320, 2950, 1640, 1530, 1500, 1400, 1250, 1180, 1030, 840, 750.

$^1\text{H-NMR}$  ( $\text{CDCl}_3$ )  $\delta$  (ppm) : 1.71 (2H, m), 2.09 (2H, m), 2.34 (6H, s), 2.74 (2H, t,  $J=5.6\text{Hz}$ ), 3.50 (2H, q,  $J=6.7\text{Hz}$ ), 4.10 (2H, t,  $J=5.8\text{Hz}$ ), 4.61 (2H, t,  $J=7.0\text{Hz}$ ), 5.45 (2H, br), 6.07 (1H, m), 6.92 (2H, d,  $J=9.2\text{Hz}$ ), 7.30 (1H, t,  $J=7.7\text{Hz}$ ), 7.52 (1H, t,  $J=7.7\text{Hz}$ ), 7.65 (2H, d,  $J=9.2\text{Hz}$ ), 7.83 (1H, d,  $J=8.4\text{Hz}$ ), 7.84 (1H, s), 7.94 (1H, d,  $J=8.2\text{Hz}$ ).

#### Example 48

##### 1-[4-[3-(2-Dimethylaminoethoxy)benzoylamino]butyl]-1H-imidazo[4,5-c]quinoline-4-amine

[0098] 0.20 g (0.448 mmol) of 1-[4-[3-(2-dimethylaminoethoxy)benzoylamino]butyl]-1H-imidazo[4,5-c]quinoline-4-amine shown below was obtained as faint yellowish white powder using 0.18 g (0.850 mmol) of 3-(2-dimethylaminoethoxy)benzoic acid as a starting material in the same manner as in Example 22.

Its spectroscopic data are as follows:

IR (KBr)  $\text{cm}^{-1}$  : 3300, 2950, 1630, 1580, 1520, 1480, 1390, 1310, 1240, 760.

$^1\text{H-NMR}$  ( $\text{CDCl}_3$ )  $\delta$  (ppm) : 1.72 (2H, m), 2.09 (2H, m), 2.33 (6H, s), 2.73 (2H, t, J=5.6Hz), 3.51 (2H, q, J=6.7Hz), 4.09 (2H, t, J=5.6Hz), 4.61 (2H, t, J=7.2Hz), 5.45 (2H, br), 6.18 (1H, m), 7.05 (1H, dd, J=8.4Hz, 2.6Hz), 7.20 (1H, d, J=8.2Hz), 7.27–7.34 (3H, m), 7.52 (1H, t, J=7.7Hz), 7.82 (1H, d, J=8.4Hz), 7.85 (1H, s), 7.94 (1H, d, J=8.2Hz).

#### Example 49

##### 1-(4-{3-[3-(2-Dimethylaminoethoxy)phenyl]propanoylamino}butyl)-1H-imidazo[4,5-c]quinoline-4-amine

[0099] 0.14 g (0.295 mmol) of 1-(4-{3-[3-(2-Dimethylaminoethoxy)phenyl]propanoylamino}butyl)-1H-imidazo[4,5-c]quinoline-4-amine shown below was obtained as faint yellowish white powder using 0.13 g (0.548 mmol) of 3-[3-(2-dimethylaminoethoxy)phenyl]propionic acid as a starting material in the same manner as in Example 22.

Its spectroscopic data are as follows:

IR (KBr)  $\text{cm}^{-1}$  : 3320, 2950, 1640, 1580, 1530, 1480, 1390, 1260, 1150, 760.

$^1\text{H-NMR}$  ( $\text{CDCl}_3$ )  $\delta$  (ppm) : 1.50 (2H, m), 1.90 (2H, m), 2.31 (6H, s), 2.43 (2H, t, J=7.6Hz), 2.69 (2H, t, J=5.8Hz), 2.89 (2H, t, J=7.6Hz), 3.25 (2H, q, J=6.5Hz), 4.01 (2H, t, J=5.6Hz), 4.52 (2H, t, J=7.0Hz), 5.38 (1H, m), 5.50 (2H, br), 6.70–6.76 (3H, m), 7.13 (1H, t, J=8.0Hz), 7.33 (1H, t, J=7.6Hz), 7.53 (1H, t, J=7.6Hz), 7.80 (1H, s), 7.83 (1H, d, J=8.6Hz), 7.91 (1H, d, J=8.4Hz).

#### Example 50

##### 1-(4-{3-[4-(2-Dimethylaminoethoxy)-3-methoxyphenyl]propanoylamino}butyl)-1H-imidazo[4,5-c]quinoline-4-amine

[0100] 0.14 g (0.277 mmol) of 1-(4-{3-[4-(2-Dimethylaminoethoxy)-3-methoxyphenyl]propanoylamino}butyl)-1H-imidazo[4,5-c]quinoline-4-amine shown below was obtained as faint yellowish white powder using 0.15 g (0.561 mmol) of 3-[4-(2-dimethylaminoethoxy)-3-methoxyphenyl]propionic acid as a starting material in the same manner as in Example 22.

Its spectroscopic data are as follows:

IR (KBr)  $\text{cm}^{-1}$ : 3350, 2950, 1650, 1523, 1480, 1400, 1260, 1220, 1140, 1030, 760.

$^1\text{H-NMR}$  ( $\text{CDCl}_3$ )  $\delta$  (ppm): 1.51 (2H, m), 1.92 (2H, m), 2.32 (6H, s), 2.41 (2H, t,  $J=7.6\text{Hz}$ ), 2.74 (2H, t,  $J=6.0\text{Hz}$ ), 2.87 (2H, t,  $J=7.4\text{Hz}$ ), 3.25 (2H, q,  $J=6.5\text{Hz}$ ), 3.82 (3H, s), 4.04 (2H, t,  $J=6.2\text{Hz}$ ), 4.53 (2H, t,  $J=7.2\text{Hz}$ ), 5.35 (1H, m), 5.52 (2H, br), 6.66 (1H, d,  $J=8.2\text{Hz}$ ), 6.70 (1H, s), 6.76 (1H, d,  $J=8.4\text{Hz}$ ), 7.34 (1H, t,  $J=7.6\text{Hz}$ ), 7.53 (1H, t,  $J=7.8\text{Hz}$ ), 7.82 (1H, s), 7.83 (1H, d,  $J=8.0\text{Hz}$ ), 7.91 (1H, d,  $J=8.0\text{Hz}$ ).

#### Example 51

##### 1-[4-[6-(2-Dimethylaminoethoxy)-2-naphthoylamino]butyl]-1H-imidazo-[4,5-c]quinoline-4-amine

[0101] 0.15 g (0.302 mmol) of 1-[4-[6-(2-Dimethylaminoethoxy)-2-naphthoylamino]butyl]-1H-imidazo-[4,5-c]quinoline-4-amine shown below was obtained as white powder using 0.14 g (0.540 mmol) of 6-(2-dimethylaminoethoxy)-2-naphthoic acid as a starting material in the same manner as in Example 22.

Its spectroscopic data are as follows:

IR (KBr)  $\text{cm}^{-1}$ : 3280, 3100, 2950, 1630, 1530, 1480, 1400, 1310, 1220, 1030, 750.

$^1\text{H-NMR}$  ( $\text{CDCl}_3$ )  $\delta$  (ppm): 1.76 (2H, m), 2.12 (2H, m), 2.37 (6H, s), 2.81 (2H, t,  $J=5.6\text{Hz}$ ), 3.57 (2H, q,  $J=6.7\text{Hz}$ ), 4.20 (2H, t,  $J=5.6\text{Hz}$ ), 4.62 (2H, t,  $J=7.0\text{Hz}$ ), 5.44 (2H, br), 6.29 (1H, m), 7.15 (1H, d,  $J=2.4\text{Hz}$ ), 7.23 (1H, dd,  $J=9.2\text{Hz}$ ,  $2.4\text{Hz}$ ), 7.29 (1H, t,  $J=7.6\text{Hz}$ ), 7.50 (1H, t,  $J=7.8\text{Hz}$ ), 7.73 (2H, s), 7.76 (1H, d,  $J=9.2\text{Hz}$ ), 7.82 (1H, d,  $J=8.4\text{Hz}$ ), 7.86 (1H, s), 7.95 (1H, d,  $J=8.2\text{Hz}$ ), 8.14 (1H, s).

#### Example 52

##### 1-[4-[4-[4-(2-Dimethylaminoethoxy)phenyl]benzoylamino]butyl]-1H-imidazo-[4,5-c]quinoline-4-amine

[0102] 0.16 g (0.318 mmol) of 1-[4-[4-[4-(2-Dimethylaminoethoxy)phenyl]benzoylamino]butyl]-1H-imidazo-[4,5-c]quinoline-4-amine shown below was obtained as faint yellowish white powder using 0.157 g (0.55 mmol) of 4-[4-(2-dimethylaminoethoxy)phenyl]benzoic acid as a starting material in the same manner as in Example 40.

Its spectroscopic data are as follows:

IR (KBr)  $\text{cm}^{-1}$ : 3310, 2940, 1630, 1530, 1490, 1400, 1250, 1030, 830, 750.

$^1\text{H-NMR}$  ( $\text{CDCl}_3$ )  $\delta$  (ppm): 1.74 (2H, m), 2.11 (2H, m), 2.36 (6H, s), 2.76 (2H, t,  $J=5.8\text{Hz}$ ), 3.53 (2H, q,  $J=6.5\text{Hz}$ ), 4.12 (2H, t,  $J=5.6\text{Hz}$ ), 4.82 (2H, t,  $J=7.0\text{Hz}$ ), 5.43 (2H, s), 6.19 (1H, t,  $J=6.0\text{Hz}$ ), 7.01 (2H, d,  $J=8.8\text{Hz}$ ), 7.30 (1H, t,  $J=7.6\text{Hz}$ ), 7.52 (1H, t,  $J=7.7\text{Hz}$ ), 7.53 (2H, d,  $J=9.2\text{Hz}$ ), 7.58 (2H, d,  $J=8.8\text{Hz}$ ), 7.73 (2H, d,  $J=8.4\text{Hz}$ ), 7.83 (1H, d,  $J=8.6\text{Hz}$ ), 7.85 (1H, s), 7.94 (1H, d,  $J=8.4\text{Hz}$ ).

#### Example 53

##### 1-[4-{3-(4-Dimethylaminophenyl)propanoylamino}butyl]-1H-imidazo-[4,5-c]quinoline-4-amine

[0103] 39 mg (0.0905 mmol) of 1-[4-{3-(4-Dimethylaminophenyl)propanoylamino}butyl]-1H-imidazo-[4,5-c]quinoline-4-amine shown below was obtained as yellowish white powder using 0.11 g (0.55 mmol) of 3-(4-dimethylaminophenyl)propionic acid as a starting material in the same manner as in Example 40.

Its spectroscopic data are as follows:

IR (KBr)  $\text{cm}^{-1}$ : 3320, 2930, 1640, 1520, 1480, 1400, 1350, 1250, 810, 760.

$^1\text{H-NMR}$  ( $\text{CDCl}_3$ )  $\delta$  (ppm): 1.50 (2H, m), 1.89 (2H, m), 2.41 (2H, t,  $J=7.4\text{Hz}$ ), 2.84 (2H, t,  $J=7.6\text{Hz}$ ), 2.86 (6H, s), 3.25 (2H, q,  $J=6.7\text{Hz}$ ), 4.50 (2H, t,  $J=7.2\text{Hz}$ ), 5.33 (1H, br), 5.47 (2H, br), 6.63 (2H, q,  $J=8.8\text{Hz}$ ), 7.03 (2H, d,  $J=8.8\text{Hz}$ ), 7.34 (1H, t,  $J=7.6\text{Hz}$ ), 7.53 (1H, t,  $J=7.7\text{Hz}$ ), 7.80 (1H, s), 7.83 (1H, d,  $J=8.4\text{Hz}$ ), 7.91 (1H, d,  $J=8.2\text{Hz}$ ).

#### Example 54

##### 1-[4-{O-(2-Dimethylaminoethyl)benzylamino}butyl]-1H-imidazo-[4,5-c]quinoline-4-amine

[0104] 13 mg (0.0242 mmol) of 1-[4-{O-(2-Dimethylaminoethyl)benzylamino}butyl]-1H-imidazo-[4,5-c]quinoline-4-amine shown below was obtained as white powder using 0.165 g (0.55 mmol) of O-(2-dimethylaminoethyl)benzyl acid as a starting material in the same manner as in Example 40.

Its spectroscopic data are as follows:

IR (KBr)  $\text{cm}^{-1}$ : 3330, 3210, 1660, 1640, 1530, 1480, 1390, 1250, 1100, 760, 700.

$^1\text{H-NMR}$  ( $\text{CDCl}_3$ )  $\delta$  (ppm): 1.60 (2H, m), 1.85 (2H, m), 2.25 (6H, s), 2.50 (2H, t,  $J=4.8\text{Hz}$ ), 3.03 (2H, t,  $J=4.6\text{Hz}$ ), 3.38 (2H, q,  $J=6.3\text{Hz}$ ), 4.41 (2H, t,  $J=7.2\text{Hz}$ ), 5.57 (2H, br), 7.22–7.32 (6H, m), 7.32 (1H, t,  $J=7.7\text{Hz}$ ), 7.42–7.49 (4H, m), 7.53 (1H, t,  $J=7.6\text{Hz}$ ), 7.65 (1H, s), 7.83 (1H, d,  $J=8.4\text{Hz}$ ), 7.87 (1H, d,  $J=8.4\text{Hz}$ ), 9.12 (1H, br).

#### Example 55

##### 1-[4-[4-(4-Dimethylamino-1-phenyl-1-butenyl)benzoylamino]butyl]-1H-imidazo-[4,5-c]quinoline-4-amine

[0105] 0.162 g (0.55 mmol) of 4-(4-Dimethylamino-1-phenyl-1-butenyl)benzoic acid was dissolved in 7 ml of chloroform, 80  $\mu\text{l}$  (1.10 mmol) of thionyl chloride and one drop of N,N-dimethylformamide were added thereto, and the mixture was refluxed under heating for 4 hours. The reaction mixture was then concentrated under reduced pressure to obtain an crude product of acid chloride form.

[0106] 0.128 g (0.50 mmol) of 1-(4-Aminobutyl)-1H-imidazo-[4,5-c]quinoline-4-amine was dissolved in a mixed solvent of 7 ml of ethanol and 4 ml of water and 0.55 ml of a 1N sodium hydroxide aqueous solution was added thereto. A solution of the acid chloride form product obtained above in 3 ml of chloroform was added dropwise to the above-obtained mixture under ice-cooling. The reaction mixture was stirred for 30 minutes, poured into a sodium hydrogencarbonate aqueous solution, and extracted twice with chloroform. The extract was dried ( $\text{Na}_2\text{SO}_4$ ) and the solvent was distilled off. The resulting residue was purified by aluminum column chromatography (chloroform:methanol = 200:1 to 30:1 (v/v)) and then silica gel chromatography (chloroform:methanol = 6:1 to 4:1 (v/v)). Finally, the purified product was triturated with ether and collected by filtration to obtain 0.152 g (0.285 mmol) of 1-[4-[4-(4-dimethylamino-1-phenyl-1-butenyl)benzoylamino]butyl]-1H-imidazo-[4,5-c]quinoline-4-amine (a mixture of E-form and Z-form) shown below as white powder.

Its spectroscopic data are as follows:

IR (KBr)  $\text{cm}^{-1}$ : 3330, 2940, 1630, 1530, 1480, 1390, 1300, 1250, 850, 750, 700.

$^1\text{H-NMR}$  ( $\text{CDCl}_3$ )  $\delta$  (ppm): 1.73 (2H, m), 2.10 (2H, m), 2.19, 2.20 (6H, s $\times$ 2), 2.29 (2H, m), 2.40 (2H, m), 3.52 (2H, m), 4.60, 4.63 (2H, t $\times$ 2,  $J=7.0\text{Hz}$ ), 5.46 (2H, br), 6.12, 6.19 (1H, br $\times$ 2), 6.13, 6.18 (1H, t $\times$ 2,  $J=7.4\text{Hz}$ , 7.4Hz), 7.16 (2H, t,  $J=8.1\text{Hz}$ ), 7.21–7.41 (6H, m), 7.51 (1H, m), 7.58, 7.70 (2H, d $\times$ 2,  $J=8.8\text{Hz}$ , 8.0Hz), 7.82, 7.83 (1H, d $\times$ 2,  $J=8.4\text{Hz}$ , 8.4Hz), 7.84, 7.86 (1H, s $\times$ 2), 7.93, 7.95 (1H, d $\times$ 2,  $J=9.0\text{Hz}$ , 8.4Hz).

## Example 56

1-[4-[4-(4-Dimethylamino-1-phenylbutyl)benzoylamino]butyl]-1H-imidazo-[4,5-c]quinoline-4-amine

- 5 [0107] 65 mg (0.122 mmol) of 1-[4-[4-(4-Dimethylamino-1-phenylbutyl)benzoylamino]butyl]-1H-imidazo-[4,5-c]quinoline-4-amine shown below was obtained as white powder using 0.164 g (0.55 mmol) of 4-(4-dimethylamino-1-phenylbutyl)benzoic acid as a starting material in the same manner as in Example 55.

Its spectroscopic data are as follows:

- 20 IR (KBr)  $\text{cm}^{-1}$ : 3330, 2940, 1630, 1530, 1480, 1400, 1310, 1250, 760, 700.  
 $^1\text{H-NMR}$  ( $\text{CDCl}_3$ )  $\delta$  (ppm): 1.42 (2H, m), 1.70 (2H, m), 2.07 (4H, m), 2.17 (6H, s), 2.29 (2H, t,  $J=7.2\text{Hz}$ ), 3.49 (2H, q,  $J=6.4\text{Hz}$ ), 3.93 (1H, t,  $J=8.0\text{Hz}$ ), 4.59 (2H, t,  $J=7.4\text{Hz}$ ), 5.50 (2H, br), 6.11 (1H, t,  $J=5.6\text{Hz}$ ), 7.15–7.31 (8H, m), 7.48 (1H, t,  $J=7.7\text{Hz}$ ), 7.60 (2H, d,  $J=8.8\text{Hz}$ ), 7.82 (1H, d,  $J=8.2\text{Hz}$ ), 7.83 (1H, s), 7.92 (1H, d,  $J=8.2\text{Hz}$ ).

## 25 Example 57

1-[4-[4-(N-(2-dimethylaminoethyl)phenylamino)benzoylamino]butyl]-1H-imidazo-[4,5-c]quinoline-4-amine

- 30 [0108] 22 mg (0.0421 mmol) of 1-[4-[4-(N-(2-dimethylaminoethyl)phenylamino)benzoylamino]butyl]-1H-imidazo-[4,5-c]quinoline-4-amine (shown below) was obtained as faint yellowish white powder using 0.156 g (0.55 mmol) of 4-[N-(2-dimethylaminoethyl)phenylamino]benzoic acid as a starting material in the same manner as in Example 55.

Its spectroscopic data are as follows:

- 45 IR (KBr)  $\text{cm}^{-1}$ : 3310, 2940, 1630, 1590, 1530, 1510, 1400, 1290, 1260, 760, 700.  
 $^1\text{H-NMR}$  ( $\text{CDCl}_3$ )  $\delta$  (ppm): 1.71 (2H, m), 2.08 (2H, m), 2.27 (6H, s), 2.57 (2H, t,  $J=7.6\text{Hz}$ ), 3.50 (2H, q,  $J=6.5\text{Hz}$ ), 3.86 (2H, t,  $J=7.6\text{Hz}$ ), 4.61 (2H, t,  $J=7.2\text{Hz}$ ), 5.53 (2H, br), 6.01 (1H, t,  $J=6.0\text{Hz}$ ), 6.76 (2H, d,  $J=9.2\text{Hz}$ ), 7.19 (3H, m), 7.30 (1H, t,  $J=7.6\text{Hz}$ ), 7.38 (2H, t,  $J=8.0\text{Hz}$ ), 7.51 (1H, t,  $J=7.8\text{Hz}$ ), 7.54 (2H, d,  $J=8.8\text{Hz}$ ), 7.82 (1H, d,  $J=8.4\text{Hz}$ ), 7.85 (1H, s), 7.94 (1H, d,  $J=8.4\text{Hz}$ ).

## 50 Example 58

1-[4-[4-[N-(3-dimethylaminopropyl)phenylamino]benzoylamino]butyl]-1H-imidazo-[4,5-c]quinoline-4-amine

- 55 [0109] 54 mg (0.101 mmol) of 1-[4-[4-[N-(3-dimethylaminopropyl)phenylamino]benzoylamino]butyl]-1H-imidazo-[4,5-c]quinoline-4-amine shown below was obtained as pale yellowish white powder using 0.164 g (0.55 mmol) of 4-[N-(3-dimethylaminopropyl)phenylamino]benzoic acid as a starting material in the same manner as in Example 55.

Its spectroscopic data are as follows:

IR (KBr)  $\text{cm}^{-1}$  : 3300, 2940, 1610, 1590, 1530, 1510, 1400, 1310, 1250, 760.

$^1\text{H-NMR}$  ( $\text{CDCl}_3$ )  $\delta$  (ppm) : 1.71 (2H, m), 1.83 (2H, m), 2.08 (2H, m), 2.22 (6H, s), 2.33 (2H, t,  $J=7.2\text{Hz}$ ), 3.50 (2H, m), 3.78 (2H, t,  $J=7.4\text{Hz}$ ), 4.61 (2H, t,  $J=7.2\text{Hz}$ ), 5.65 (2H, br), 6.03 (1H, br), 6.76 (2H, d,  $J=8.8\text{Hz}$ ), 7.15–7.22 (3H, m), 7.31 (1H, t,  $J=7.6\text{Hz}$ ), 7.38 (2H, t,  $J=7.8\text{Hz}$ ), 7.52 (1H, t,  $J=7.4\text{Hz}$ ), 7.54 (2H, d,  $J=8.8\text{Hz}$ ), 7.83 (1H, d,  $J=8.0\text{Hz}$ ), 7.86 (1H, s), 7.94 (1H, d,  $J=8.0\text{Hz}$ ).

#### Example 59

##### 1-(4-[(α-(2-Dimethylaminoethoxy)-α-phenyl-p-toluoyl)amino]butyl)-2-methyl-1H-imidazo-[4,5-c]quinoline-4-

[0110] 36 mg (0.0653 mmol) of 1-(4-[(α-(2-Dimethylaminoethoxy)-α-phenyl-p-toluoyl)amino]-butyl)-2-methyl-1H-imidazo-[4,5-c]quinoline-4-amine shown below was obtained as faint yellowish white powder using 67 mg (0.224 mmol) of α-(2-dimethylaminoethoxy)-α-phenyl-p-toluic acid and 55 mg (0.204 mmol) of 1-(4-aminobutyl)-2-methyl-1H-imidazo-[4,5-c]quinoline-4-amine as starting materials in the same manner as in Example 55.

Its spectroscopic data are as follows:

IR (KBr)  $\text{cm}^{-1}$  : 3320, 2940, 1630, 1540, 1480, 1430, 1380, 1310, 100, 750, 700.

$^1\text{H-NMR}$  ( $\text{CDCl}_3$ )  $\delta$  (ppm) : 1.77 (2H, m), 2.02 (2H, m), 2.27 (6H, s), 2.60 (2H, t,  $J=5.8\text{Hz}$ ), 2.65 (3H, s), 3.50 (2H, q,  $J=6.7\text{Hz}$ ), 3.56 (2H, td,  $J=6.0\text{Hz}$ , 2.4Hz), 4.50 (2H, t,  $J=7.6\text{Hz}$ ), 5.39 (1H, s), 5.54 (2H, br), 6.13 (1H, t,  $J=5.8\text{Hz}$ ), 7.22–7.34 (6H, m), 7.41 (2H, d,  $J=8.4\text{Hz}$ ), 7.45 (1H, t,  $J=7.8\text{Hz}$ ), 7.63 (2H, d,  $J=8.0\text{Hz}$ ), 7.81 (1H, d,  $J=8.4\text{Hz}$ ), 7.89 (1H, d,  $J=8.0\text{Hz}$ ).

#### Example 60

##### 1-(4-[(α-(2-Dimethylaminoethoxy)-α-phenyl-p-toluoyl)amino]butyl)-2-ethoxymethyl-1H-imidazo-[4,5-c]quinoline-4-amine

[0111] 0.128 g (0.215 mmol) of 1-(4-[(α-(2-Dimethylaminoethoxy)-α-phenyl-p-toluoyl)amino]-butyl)-2-ethoxymethyl-1H-imidazo-[4,5-c]quinoline-4-amine shown below was obtained as faint yellowish white powder using 0.165 g (0.55 mmol) of α-(2-dimethylaminoethoxy)-α-phenyl-p-toluic acid and 0.157 g (0.50 mmol) of 1-(4-aminobutyl)-2-ethoxymethyl-1H-imidazo-[4,5-c]quinoline-4-amine as starting materials in the same manner as in Example 55.

Its spectroscopic data are as follows:

IR (KBr)  $\text{cm}^{-1}$ : 3300, 2940, 1630, 1540, 1480, 1440, 1390, 1310, 1100, 760, 700.

$^1\text{H-NMR}$  ( $\text{CDCl}_3$ )  $\delta$  (ppm): 1.20 (3H, t,  $J=7.0\text{Hz}$ ), 1.82 (2H, m), 2.07 (2H, m), 2.27 (6H, s), 2.60 (2H, t,  $J=6.0\text{Hz}$ ), 3.52 (2H, q,  $J=6.4\text{Hz}$ ), 3.56 (2H, td,  $J=5.9\text{Hz}$ , 2.5Hz), 3.59 (2H, q,  $J=7.1\text{Hz}$ ), 4.62 (2H, t,  $J=8.0\text{Hz}$ ), 4.79 (2H, s), 5.39 (1H, s), 5.50 (2H, br), 6.18 (1H, t,  $J=5.9\text{Hz}$ ), 7.22~7.34 (6H, m), 7.40 (2H, d,  $J=8.4\text{Hz}$ ), 7.46 (1H, t,  $J=7.7\text{Hz}$ ), 7.64 (2H, d,  $J=8.4\text{Hz}$ ), 7.80 (1H, d,  $J=8.4\text{Hz}$ ), 7.91 (1H, d,  $J=8.0\text{Hz}$ ).

#### Example 61

##### Production of ointment containing 0.2% of the compound of Example 40

[0112] Preparation: An ointment containing the compound of the present invention was prepared in the following manner:

Compound of Example 40	0.02 g
Sorbitan monolaurate (SP-20)	2.0 g
White petrolatum	7.98 g
Total amount	10.0 g

[0113] 0.02 g of The compound of the present invention was added to 2 g of SP-20 maintained at  $80^\circ\text{C}$  and the mixture was stirred to dissolve the compound. 7.98 g of white petrolatum separately melted by heating ( $80^\circ\text{C}$ ) was added thereto and the mixture was cooled to room temperature with stirring.

#### Example 62

##### Production of ointment containing 2% of the compound of Example 40

[0114] Preparation: An ointment containing the compound of the present invention was prepared in the following manner:

Compound of Example 40	0.2 g
Sorbitan monolaurate (SP-20)	2.0 g
White petrolatum	7.8 g
Total amount	10.0 g

[0115] 0.2 g of the compound of the present invention was added to 2 g of SP-20 maintained at 80°C and the mixture was stirred to dissolve the compound. 7.8 g of white petrolatum separately melted by heating (80°C) was added thereto and the mixture was cooled to room temperature with stirring.

#### Comparative Example 1

#### Production of ointment containing 2% Imiquimod

[0116] 0.5 g of Imiquimod synthesized by the method described in U.S. Patent No. 4988815 was added to 5 g of iso-stearic acid maintained at 80°C and dissolved by stirring. 19.5 g of white petrolatum separately melted by heating (80°C) was added thereto and the mixture was cooled to room temperature with stirring.

#### Comparative Example 2

#### External preparation containing betamethasone valerate

[0117] 0.12% Rinderon V ointment (Shionogi) was used as it was.

#### Example 63

#### Measurement of interferon functions

#### Test method

#### (1) Preparation of mononuclear cell fraction

[0118] A 8-ml portion of peripheral blood collected from three human subjects (adult females) was immediately distributed into a Leukoprep tube (tubes for separating leukocytes, Falcon). The resulting Leukoprep tubes were subjected to centrifugation (BECKMAN CS-6KR, 20°C, 3,000 rpm, 30 minutes) and the mononuclear cell phase was recovered. The mononuclear cell phase was washed twice with RPMI-1640 medium (containing 10% fetal calf serum, penicillin-streptomycin, hereinafter referred to as RPMI-1640 medium) and adjusted to give a cell density of  $1.3 \times 10^6$  cells/ml with RPMI-1640 medium.

#### (2) Preparation of each test drug

[0119] The compounds of the present invention were dissolved in DMSO and the solutions were each added to RPMI-1640 medium. The concentration of the drug was adjusted to 40  $\mu$ M, 12.8  $\mu$ M, 4  $\mu$ M, and 1.28  $\mu$ M.

#### (3) Interferon induction test

[0120] A 150  $\mu$ l portion of the cells ( $1.3 \times 10^6$  cells/ml) prepared by the method as described above was added to each well of a 96-well plate (Corning). A 50  $\mu$ l portion of the drug prepared by the method as described above was added thereto and the plate was incubated in a CO<sub>2</sub> incubator for 24 hours in the case of IFN- $\alpha$  and 96 hours in the case of IFN- $\gamma$  (final drug concentrations: 10  $\mu$ M, 3.2  $\mu$ M, 1  $\mu$ M, and 0.32  $\mu$ M, final DMSO concentrations: 0.05 to 0.1%). After completion of the incubation, the cell suspension was transferred to a microtube and centrifuged at 8,000 rpm for 10 minutes to recover a supernatant. The resulting supernatant was subjected to IFN determination by ELISA using a human interferon- $\alpha$  determination kit (Otsuka Pharmaceutical) and a human interferon- $\gamma$  determination kit (BioSource International).

#### Results

[0121] The activities of inducing interferon from human peripheral blood mononuclear cells of Imiquimod and the compounds of the present invention are shown in Tables 1 and 2.

[0122] Many of the compounds of the examples exhibited interferon-inducing activity comparable to or more than that of Imiquimod. Particularly, the compound of Example 40 showed about 100 times as high IFN- $\alpha$  and IFN- $\gamma$  inducing activity as Imiquimod.

#### Eosinophilic leukocyte skin infiltration-inhibiting effect

##### (1) Test method

[0123] Four-week-old Balb/c mice (male) were purchased from Nippon Crea. The mice were tamed under conditions of room temperature of 23 $\pm$ 2°C, humidity of 50 $\pm$ 10% (irradiation time, 8:00 to 20:00) for more than one week and then subjected to the test. The test was carried out under non-fasting conditions and the mice was allowed to freely take

water and feed during the test period after the test compound was administered (the weight during the test: 18 to 32 g).

#### (1) Sensitization and induction

- 5 [0124] RO water (3.8 ml) and physiological saline (1.2 ml) were added to an amount of 10 mg protein of mite extract-Dp (Cosmo Bio) to prepare a solution of a concentration of 2 mg protein/ml (undiluted solution). The undiluted solution was adjusted to have a concentration of 500 µg protein/ml using physiological saline and a one-fortieth amount of a Bordetella pertussis solution was added thereto to serve as a sensitization solution. Sensitization was performed by subcutaneously administering 200 µl of the sensitization solution to the cervical region of the mice using Myjector (Terumo).
- 10 The sensitization was performed three times including the first sensitization every seven days by the above method. Twenty-one days after the first sensitization, induction was carried out by subcutaneously administering on the back of the mice using Myjector (Terumo) 50 µl of the mite antigen solution that had been adjusted with a 0.9% sodium chloride aqueous solution to give a concentration of 200 µg protein/ml.

#### 15 (2) Recovery of skin and observation of pathological specimen

- [0125] Forty-eight hours after the induction, the mice were sacrificed by cervical dislocation. Their skin on the back was peeled off and the skin was cut by 1 cm square taking the marking site as a center. The recovered skin was placed in 10% neutral formalin buffer (using 15-ml centrifugation tube manufactured by Corning) and fixed by allowing it to stand at room temperature for one day or longer. The fixed skin was made into a paraffin section by the conventional method and subjected to Runa staining. (Two sites, namely the center of the skin sample and 2 mm upper site from it toward the head, were cut off in the vertical direction of the axis.) The number of eosinophilic leukocytes per 1 cm of one section under optical microscopic observation of the specimen (400-fold magnification).

- [0126] The inhibitory effect of the drug was calculated by the following equation:

$$25 \text{ Inhibitory rate (\%)} = \left( \frac{\text{number of eosinophilic leukocytes in the base-administered group} - \text{number of eosinophilic leukocytes in the test compound-administered group}}{\text{number of eosinophilic leukocytes in the base-administered group}} \right) \times 100$$

#### 30 (3) Preparation of each test drug

Preparation of 2% Imiquimod ointment

- [0127] Imiquimod (0.5 g), which had been synthesized by the method as described in U.S. Patent No. 4,988,815, was added to 5 g of isostearic acid maintained at 80°C and the mixture was stirred to dissolve the drug. White petrolatum (19.5 g) that had been melted by heating (80°C) was added thereto and the mixture was cooled to room temperature with stirring.

Preparation of ointment containing 0.2% of the compound of Example 40

- [0128] The titled ointment was prepared by the method of Example 61.

External preparation of betamethasone valerate

- 45 [0129] 0.12% Rinderon V ointment (Shionogi) was used as it was.

#### (4) Method of administering drugs

Percutaneous administration (Occlusive dressing technique (OPT))

- 50 [0130] Mice were anesthetized with ether and their hair at the center of the back was cut with an electric clipper so as not to hurt the skin. The portion to be subjected to induction at the center on the back was marked with oil ink in advance. Before the induction, a drug (test compound) was coated within 3 cm square with the marked portion on the back as the center. In contrast, after the induction with a mite, the drug was coated within 2 cm square with the induction site as the center. A lap was layered thereon to cover the coated portion and fixed with an elastic tape (Elastocin, Johnson & Johnson Medical Inc.). Only a base was coated for the control group.

[0131] The dose of the drug was 50 mg per animal. The drug was administered for consecutive four days from the day before the induction as shown in the following schedule:

Two days before the induction → the day of induction (immediately after induction) → the next day of the induction (three times in total)

## (2) Results

[0132] Table 3 shows an inhibitory effect of the 2% Imiquimod ointment, ointment of 2% of the compound of Example 40, and 0.12% betamethasone valerate ointment on the mite-induced eosinophilic leukocyte infiltration to mouse skin. The ointment of the compound of Example 40 inhibited the eosinophilic leukocyte infiltration at the level comparable to the betamethasone valerate ointment.

**Table 3 Inhibitory effect on mite-induced eosinophilic leukocyte infiltration to mouse skin**

Drug administered and its dose	Number of cases	Number of eosinophilic leukocytes (cells/cm)	Inhibitory rate (%)
<b>Non-sensitized animals</b>			
Non-induction	3	12.0 ± 3.0	—
<b>Sensitized animals</b>			
Induction by a mite			
Base ointment	7	679.57 ± 149.98	—
2% Imiquimod ointment	4	111.50 ± 30.38	83.59
Ointment of 0.2% of the compound of Example 40	8	164.63 ± 33.43	75.77
0.12% betamethasone valerate ointment	8	108.75 ± 24.99	84.00

[0133] The number of eosinophilic leukocytes in each group two days after the induction was shown by mean ± S.D.

## Example 65

### Percutaneous absorbability

#### (1) Test method

[0134] Four-week old hairless mice (male) were purchased from Nippon Crea and subjected to the test after a one-week taming period. The percutaneous absorbability test was carried out in accordance with the method of Tomohiro Hikima et al. (Yakuzaigaku (Pharmacology) 55(2), 122-126, 1995). The unhurt skin (intact skin) on the back of the mice was cut off and set on a vertical 2-cell type membrane permeation test device (VIDREZX). The 2% Imiquimod ointment and the ointment of 2% of the test compound (300 mg) were applied on the skin of the donor cells and the receptor cells were filled with PBS containing penicillin (50 U/ml) and streptomycin (50 µg/ml). The receptor solution was maintained at the constant temperature (37°C) to perform the permeation test. A 100 µl portion of the test solution was sampled from the sampling outlet with the passage of time and the drug in the sample was determined by HPLC. The rate of drug permeation to the skin was calculated by the results.

## (2) Results

[0135] As shown in Table 4, the permeation rate of the ointment of 2% of the compound of Example 40 to the hairless mouse skin was found to be about 14 times as fast as that of the 2% Imiquimod ointment in the case of using the intact skin.

Table 4 Percutaneous permeability

Drug administered	Rate drug permeation to intact skin ( $\mu\text{g}/\text{cm}^2/\text{hr}$ )
2% Imiquimod	0.07
Ointment of 2% of the compound of Example 40	0.98

## INDUSTRIAL APPLICABILITY

[0136] As described above, the present invention provides novel amide derivatives. The amide derivatives of the present invention have a potent interferon ( $\alpha, \gamma$ )-inducing activity and excellent percutaneous absorbability and are useful for therapy of various tumors, viral diseases, and particularly allergic inflammatory diseases such as atopic dermatitis by an eosinophilic leukocyte skin infiltration inhibitory effect.

## Claims

1. An amide derivative represented by the following formula I and its pharmaceutically acceptable acid addition salt:

where in the formula I,  $R_1$  and  $R_2$  represent an alkyl group having 1 to 6 carbon atoms that may be branched and may form a ring together, or one of them may form a ring together with any atom in X, Y, or the methylene chain, X and Y independently represents an oxygen atom, S(O)<sub>p</sub>, wherein p is an integer of 0 to 2,  $NR_4$ ,  $CR_5=CR_6$ ,  $CR_7R_8$ , or phenylene group that may be substituted, wherein  $R_4$ ,  $R_5$ ,  $R_6$ ,  $R_7$ , and  $R_8$  independently represents an hydrogen atom, a lower alkyl group, a hydroxyl group, a lower alkoxy group, an amino group, a mono- or di-lower alkyl substituted amino group, a carboxyl group, a lower alkoxy carbonyl group, aromatic ring group that may be substituted, or heterocyclic ring group that may be substituted, Z represents an aromatic ring or a heterocyclic ring, which may be substituted with a lower alkyl group, a hydroxyl group, a lower alkoxy group, or halogen,  $R_3$  represents a hydrogen atom, phenyl group that may be substituted, a lower alkyl group that may be substituted with a phenyl group, a phenoxy group, a benzyloxy group, a lower alkoxy group, an amino group, a mono- or di-lower alkyl substituted amino group, a carboxyl group, or a lower alkoxy carbonyl group, g, i, and k independently represents an integer of 0 to 6, h, j, and l independently represents 0 or 1, m represents an integer of 0 to 5, and n represents an integer of 2 to 12.

2. A medicinal preparation comprising the amide derivative of claim 1.

3. An intermediate represented by the following formula II:

15 where in the formula II,  $\text{R}_3'$  represents a phenyl group that may be substituted, a lower alkyl group that may be substituted with a phenyl group, a phenoxy group, a benzyloxy group, a lower alkoxy group, an amino group, a mono- or di-lower alkyl substituted amino group, a carboxyl group, or a lower alkoxycarbonyl group, and  $n$  represents an integer of 2 to 12.

4. An intermediate represented by the following formula III:

35 where in the formula III,  $\text{R}_3'$  represents a phenyl group that may be substituted, a lower alkyl group that may be substituted with a phenyl group, a phenoxy group, a benzyloxy group, a lower alkoxy group, an amino group, a mono- or di-lower alkyl substituted amino group, a carboxyl group, or a lower alkoxycarbonyl group, and  $n$  represents an integer of 2 to 12.

5. An intermediate represented by the following formula IV:

50 where in the formula IV, when  $\text{R}_9$  is a hydrogen atom,  $\text{R}_{10}$  represents an alkanoyl group having 1 to 8 carbon atoms of a carbon chain that may have a branched chain, a haloalkanoyl group having 1 to 8 carbon atoms of a carbon chain that may have a branched chain, a phenylalkanoyl group having 1 to 8 carbon atoms of a carbon chain, whose benzene ring may be substituted with halogen, a nitro group, or a methoxy group, a phenoxyalkanoyl group having 1 to 8 carbon atoms of a carbon chain, whose benzene ring may be substituted with halogen, a nitro group, or a methoxy group, an alkoxycarbonyl group having 1 to 8 carbon atoms of a carbon chain that may have a branched chain, a haloalkoxycarbonyl group having 1 to 8 carbon atoms of a carbon chain that may have a branched chain, or a phenylalkoxycarbonyl group having 1 to 8 carbon atoms of a carbon chain, whose benzene ring may be substituted with halogen, a nitro group, or a methoxy group.  $\text{R}_9$  and  $\text{R}_{10}$  may form an aromatic cyclic

imide together that may be substituted with halogen, a nitro group or a methoxy group,  $R_3$  represents a phenyl group that may be substituted, a lower alkyl group that may be substituted with a phenyl group, a phenoxy group, a benzyloxy group, a lower alkoxy group, an amino group, a mono- or di-lower alkyl substituted amino group, a carboxyl group, or a lower alkoxy carbonyl group, and  $n$  represents an integer of 2 to 12.

6. An intermediate represented by the following formula V:

where in the formula V, when  $R_9$  is a hydrogen atom,  $R_{10}$  represents an alkanoyl group having 1 to 8 carbon atoms of a carbon chain that may have a branched chain, a haloalkanoyl group having 1 to 8 carbon atoms of a carbon chain that may have a branched chain, a phenylalkanoyl group having 1 to 8 carbon atoms of a carbon chain, whose benzene ring may be substituted with halogen, a nitro group, or a methoxy group, a phenoxyalkanoyl group having 1 to 8 carbon atoms of a carbon chain, whose benzene ring may be substituted with halogen, a nitro group, or a methoxy group, an alkoxy carbonyl group having 1 to 8 carbon atoms of a carbon chain that may have a branched chain, a haloalkoxy carbonyl group having 1 to 8 carbon atoms of a carbon chain that may have a branched chain, or a phenylalkoxy carbonyl group having 1 to 8 carbon atoms of a carbon chain, whose benzene ring may be substituted with halogen, a nitro group, or a methoxy group,  $R_9$  and  $R_{10}$  may form an aromatic cyclic imide together that may be substituted with halogen, a nitro group or a methoxy group,  $R_3$  represents a phenyl group that may be substituted, a lower alkyl group that may be substituted with a phenyl group, a phenoxy group, a benzyloxy group, a lower alkoxy group, an amino group, a mono- or di-lower alkyl substituted amino group, a carboxyl group, or a lower alkoxy carbonyl group, and  $n$  represents an integer of 2 to 12.

7. An intermediate represented by the following formula VI:

where in the formula VI, when  $R_9$  is a hydrogen atom,  $R_{10}$  represents an alkanoyl group having 1 to 8 carbon atoms of a carbon chain that may have a branched chain, a haloalkanoyl group having 1 to 8 carbon atoms of a carbon chain that may have a branched chain, a phenylalkanoyl group having 1 to 8 carbon atoms of a carbon chain, whose benzene ring may be substituted with halogen, a nitro group, or a methoxy group, a phenoxyalkanoyl group having 1 to 8 carbon atoms of a carbon chain, whose benzene ring may be substituted with halogen, a nitro group, or a methoxy group, an alkoxy carbonyl group having 1 to 8 carbon atoms of a carbon chain that may have a branched chain, a haloalkoxy carbonyl group having 1 to 8 carbon atoms of a carbon chain that may have a branched chain, or a phenylalkoxy carbonyl group having 1 to 8 carbon atoms of a carbon chain, whose benzene ring may be substituted with halogen, a nitro group, or a methoxy group,  $R_9$  and  $R_{10}$  may form an aromatic cyclic imide together that may be substituted with halogen, a nitro group or a methoxy group,  $R_3$  represents a hydrogen atom, a phenyl group that may be substituted, a lower alkyl group that may be substituted with a phenyl group, a phenoxy group, a benzyloxy group, a lower alkoxy group, an amino group, a mono- or di-lower alkyl substituted amino group, a carboxyl group, or a lower alkoxy carbonyl group, and  $n$  represents an integer of 2 to 12.

8. An intermediate represented by the following formula VII:

where in the formula VII, when  $R_9$  is a hydrogen atom,  $R_{10}$  represents an alkanoyl group having 1 to 8 carbon atoms of a carbon chain that may have a branched chain, a haloalkanoyl group having 1 to 8 carbon atoms of a carbon chain that may have a branched chain, a phenylalkanoyl group having 1 to 8 carbon atoms of a carbon chain, whose benzene ring may be substituted with halogen, a nitro group, or a methoxy group, a phenoxyalkanoyl group having 1 to 8 carbon atoms of a carbon chain, whose benzene ring may be substituted with halogen, a nitro group, or a methoxy group, an alkoxy carbonyl group having 1 to 8 carbon atoms of a carbon chain that may have a branched chain, a haloalkoxy carbonyl group having 1 to 8 carbon atoms of a carbon chain that may have a branched chain, or a phenylalkoxy carbonyl group having 1 to 8 carbon atoms of a carbon chain, whose benzene ring may be substituted with halogen, a nitro group, or a methoxy group,  $R_9$  and  $R_{10}$  may form an aromatic cyclic imide together that may be substituted with halogen, a nitro group or a methoxy group,  $R_3$  represents a hydrogen atom, a phenyl group that may be substituted, a lower alkyl group that may be substituted with a phenyl group, a phenoxy group, a benzyloxy group, a lower alkoxy group, an amino group, a mono- or di-lower alkyl substituted amino group, a carboxyl group, or a lower alkoxy carbonyl group, and  $n$  represents an integer of 2 to 12.

9. An intermediate represented by the following formula VIII:

where in the formula VIII, when  $R_9$  is a hydrogen atom,  $R_{10}$  represents an alkanoyl group having 1 to 8 carbon atoms of a carbon chain that may have a branched chain, a haloalkanoyl group having 1 to 8 carbon atoms of a carbon chain that may have a branched chain, a phenylalkanoyl group having 1 to 8 carbon atoms of a carbon chain, whose benzene ring may be substituted with halogen, a nitro group, or a methoxy group, an alkoxy carbonyl group having 1 to 8 carbon atoms of a carbon chain that may have a branched chain, a haloalkoxy carbonyl group having 1 to 8 carbon atoms of a carbon chain that may have a branched chain, or a phenylalkoxy carbonyl group having 1 to 8 carbon atoms of a carbon chain, whose benzene ring may be substituted with halogen, a nitro group, or a methoxy group,  $R_9$  and  $R_{10}$  may form an aromatic cyclic imide together that may be substituted with halogen, a nitro group or a methoxy group,  $R_3$  represents a hydrogen atom, a phenyl group that may be substituted, a lower alkyl group that may be substituted with a phenyl group, a phenoxy group, a benzyloxy group, a lower alkoxy group, an amino group, a mono- or di-lower alkyl substituted amino group, a carboxyl group, or a lower alkoxy carbonyl group, and  $n$  represents an integer of 2 to 12.

10. An intermediate represented by the following formula IX:

where in the formula IX, when  $R_9$  is a hydrogen atom,  $R_{10}$  represents an alkanoyl group having 1 to 8 carbon atoms of a carbon chain that may have a branched chain, a haloalkanoyl group having 1 to 8 carbon atoms of a carbon chain that may have a branched chain, a phenylalkanoyl group having 1 to 8 carbon atoms of a carbon chain, whose benzene ring may be substituted with halogen, a nitro group, or a methoxy group, a phenoxyalkanoyl group having 1 to 8 carbon atoms of a carbon chain, whose benzene ring may be substituted with halogen, a nitro group, or a methoxy group, an alkoxycarbonyl group having 1 to 8 carbon atoms of a carbon chain that may have a branched chain, a haloalkoxycarbonyl group having 1 to 8 carbon atoms of a carbon chain that may have a branched chain, or a phenylalkoxycarbonyl group having 1 to 8 carbon atoms of a carbon chain, whose benzene ring may be substituted with halogen, a nitro group, or a methoxy group.  $R_9$  and  $R_{10}$  may form an aromatic cyclic imide together that may be substituted with halogen, a nitro group or a methoxy group, and  $n$  represents an integer of 2 to 12.
